advanced
mechatronics

isel Germany is part of the stocklisted company Aalberts since February 2022. Since the inception in 1975, Aalberts is where technology matters and real progress can be made - humanly, financially and environmentally.

Greatness is made
of shared knowledge

Just like isel Germany, all Aalberts companies stand their ground in the engineering and technology world. As the world is changing rapidly and innovation cycles are reduced dramatically, the open and pragmatic internal culture at Aalberts helps us to exchange fresh thinking and to embrace new technologies.

Dear business partners,

it is very nice what you are interested in our company. We develop and manufacture **CNC machines** and **automation solutions** for a wide variety of requirements, industries and for customers all over the world - with a **modular approach**, diverse and open to technology. However, if you look more closely, our greatest strength lies in the detail – in our system units as well as in our process components. The **high degree of vertical integration and speed** as well as the quality of the components have always been our main factors leading to our success.

Precise linear technology, drive elements with high traversing and positioning accuracy, hardware, software and much more - with the developed **range of components** we can consequently offer you a customer-specific automation solution in a quick as well as flexible manner. We are **experts when it comes** to individual key components and at the same time we understand the big picture - since our quality standards are based on a deep understanding of the relationships between machine, tool, and process. And this is not just the case when standardized components are required, but also if our customers need the design of a special solution. We work in a customer-oriented manner and ensure a high level of flexibility offered by a medium-sized company.

Thanks to our **in-house** production guaranteed by a modern **CNC machine park** and the constant availability of almost all components, we are able to ensure **rapid**

processes when it comes to implementation. As our customer you will get everything from a single source: from the development and design to the manufacturing, delivery, assembly, commissioning, service, and documentation. In doing so we become the **preferred partner** for our customers. In addition, this permits us the economic implementation of extremely complex projects within a very short term.

In the course of our **50-year company history** which started in 1972 we have been building up a wide range of technology and engineering expertise across all industry boundaries. In addition, by setting up a partner program, we have succeeded in building up a powerful **competence network** in the fields of 3D printing, dosing and laser applications. Finally, this put us into the position of strengthening our position versus our competitors. Overall, the company isel Germany GmbH stands on a strong foundation being essential for its further development. This is the reason why we will continue to be a fundamental point of contact for our customers in the future when it comes to **automation** as well as to **Industry 4.0**.

Have lots of fun when you will plan your new automation solution, and discover the potential of your processes.

Excellent automation...

Thanks to the industrial communication protocol OPC - UA with its interface to our in-house software ProNC we will guide you on the way to Industry 4.0. By means of this interface, automation solutions by isel offer a completely automated remote control solution, intelligent data modelling and integrated security and authentication mechanisms.

From generation to generation...

we develop individual solutions for your automation-related tasks. Since every single automation solution is based on a high-performance software, by which the task at hand can be implemented quickly and conveniently. Thanks to our in-house post-processors by isel, we offer options in the field of the machine code generation by using a wide variety of CAD/CAM systems.

Competent support...

and free service with expert advice and, if necessary, the fastest possible troubleshooting, we offer you favorable maintenance contracts, telephone customer support, on-site troubleshooting as well as training and maintenance of your isel CNC machine. If you wish to commission your system on site, we are on hand with our service.

We know your machine...

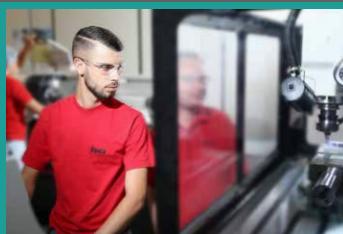

and are professionals in the fields of care and maintenance, because nobody can afford a production downtime. We ensure that your isel product will always run in a reliable manner. The regular maintenance by our qualified service technicians ensures maximum accuracy and reliability - for the entire lifetime of the machine. We maintain your machine professionally, safely, and reliably.

Quality in industry & mechanical engineering

for more than four decades with extensive experience in automation and exclusive production in Germany. The components from isel, characterized by the label „made by isel“, guarantee trust and safety, reduce downtimes and thus significantly increase the throughput of the machines.

Training from a specialist...

for a smooth workflow with your CNC machine. We familiarise you with the software as well as with the system. In this manner, you can prevent downtimes and work in an efficient way. Train in our application centre on an identical CNC machine and get to know new functions and applications.

Open for you around the clock!

From A (Aluminiumprofil, aluminium profile) to Z (Zahnriemenantrieb, toothed beltdrive): The isel online shop offers not only components for automation, but also complete CNC systems. Free download of CAD data, technical data sheets and operating instructions complete our range - just take a look on our website www.isel.com

We are upgrading...

so that your CNC machines remain state-of-the-art at any time. We would be very glad to offer you upgrade options which are individually tailored to your CNC system.

If a replacement is required...

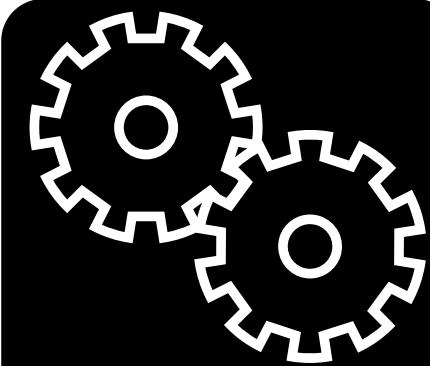

Our specialists will be glad to support you with your spare parts order. We supply you with the mechanical, electronic, and pneumatic spare parts for your machine in an uncomplicated and cost-effective manner. If you need any help for the installation, just give us a call.

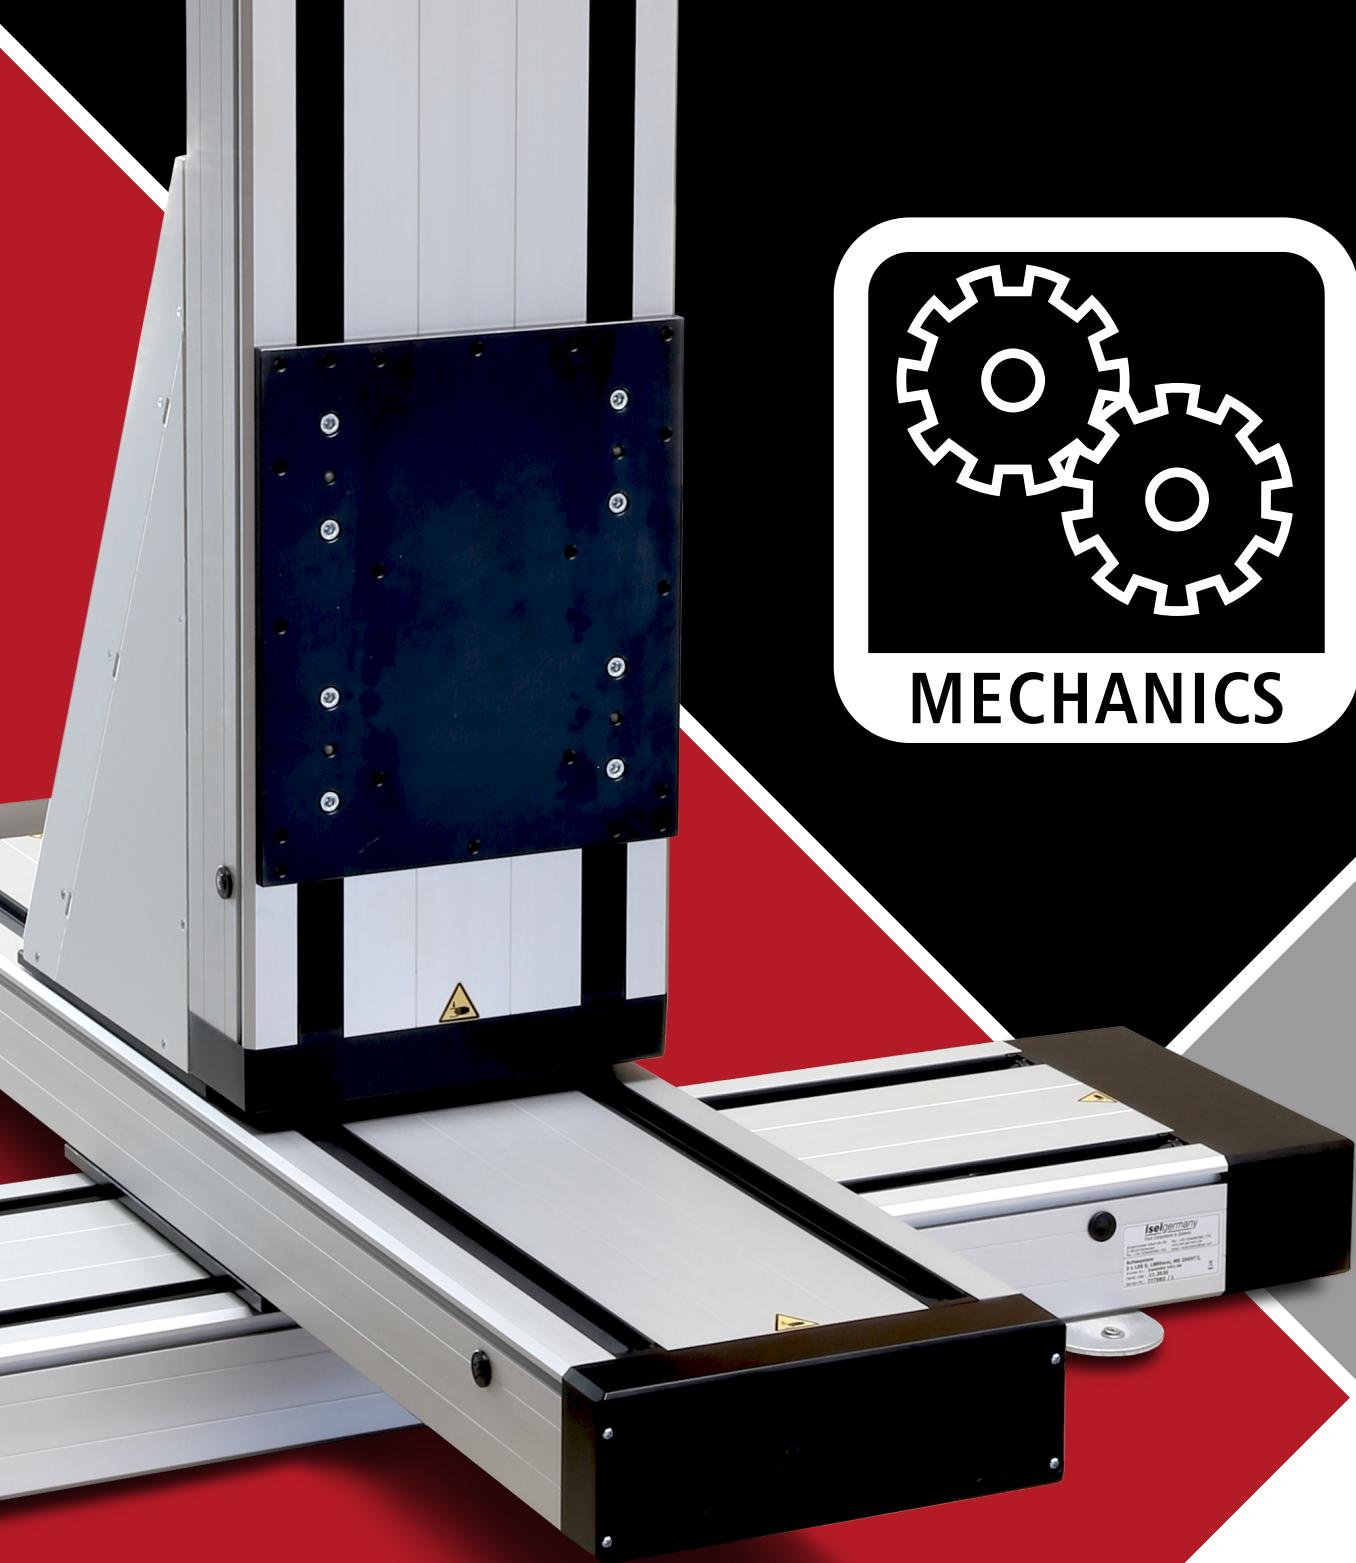

Our engineering team...

will be happy to implement mechanical and electronic designs as well as software adaptations for your automation task. Adaptations to axis and rotation units as well as control cabinet configurations with risk assessments and documentation services are no problem for us. Individual programming in CNC and PLC environments is solved by the team according to the respective requirements.

 *successful with
CNC TECHNOLOGY*

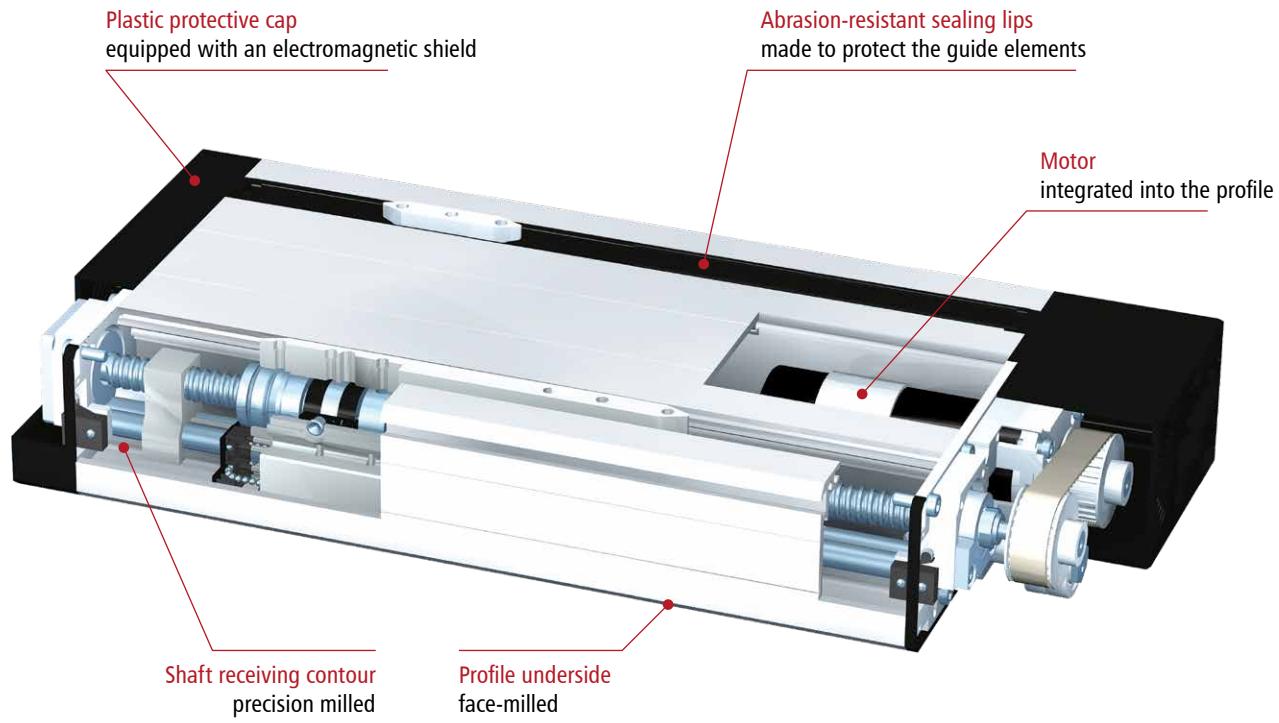

Designed for such tasks as simple and highly dynamic ones

Linear units are starting to become increasingly crucial as production as assembly processes continue to be automated. Linear units, which are equipped with a spindle drive, are mostly used only when high axial thrust and high level of accuracy are required. Each movement task demands an individual technically adequate solution to ensure the optimal level in terms of economic success.

Many linear units, which are equipped with spindle drives, are based on aluminum guide rails with rigid precision steel shafts that are combined with ball-guided shaft slides. You should trust a plug-in solution that can be integrated into the current technical system, or have a suitable linear system designed with all the necessary components for your application. The range of accessories offers you freedom when creating designs of individual design ideas.

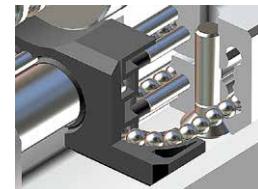

Functional overview based on example LES 5

- End position buffering on 2 sides with soft PVC parabolic springs
- Counter bearing equipped with 2 needle sleeves

- Spindle support starting from a profile length of 1,500 mm done without restricting the travel range

- Circulation of the ball inside the patented aluminum linear slide
- Glass-fiber reinforced deflection parts equipped with scrapers

- Clearance-free ball screw nut equipped with scrapers
- Central lubricating device for ball screw nut and circulations

- Integrated overrun limit switch
- Spindle bearing equipped with angular ball bearings
- Axial position without clearance due to self-locking special slotted nut

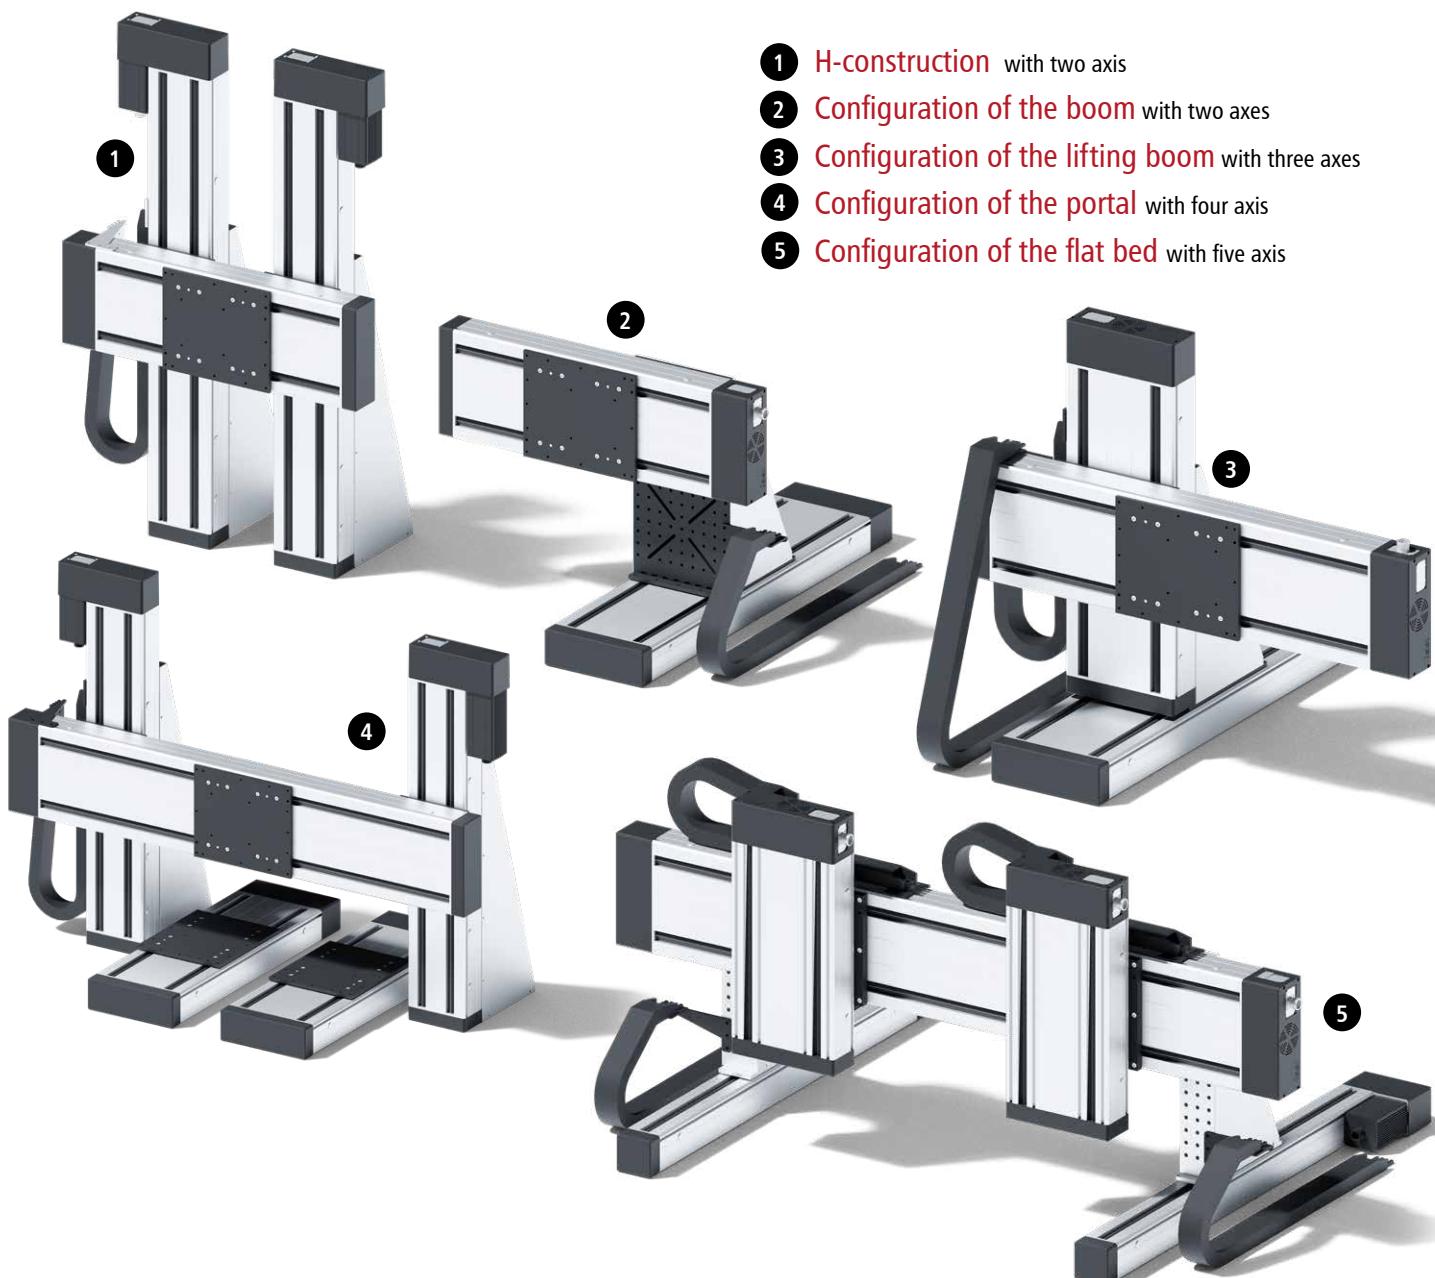

- Belt deflection and connection electronics fully covered by the protective cap

**Z-lift arrangement**

three axes equipped with cross table platforms and connecting brackets

**Flatbed arrangement**

Gantry operation ensured by three axis

Linear unit is equipped with spindle drive iLE 20/20

The LES 5 undergoes the complete development!

Two drives - one axis

With the linear unit, there is the possibility of incorporating two independent linear movements in simply one unit by installing two ball screw spindles. Therefore, 2 linear movements' realization is made possible with the smallest dimensions.

The linear units can be purchased with either one or two integrated ball screw drives ($\varnothing 20$ mm), pitches of either 5/10/20/40 mm, and with 2, 4 or 6 aluminum clamping plates.

- Aluminum shaft mounting profile, anodized
- Milled clamping surface
- 20 precision steel rails equipped with steel slides
- Profile sealing is equipped with abrasion-resistant sealing lips
- 2 limit and reference switches
- Repeatability +/- 0.02 mm

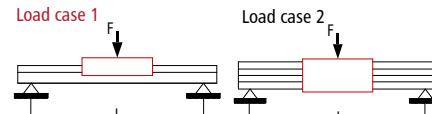

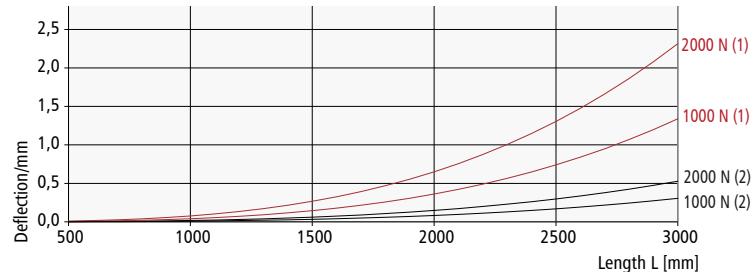

Options

- Stepping or servo motor

Linear unit equipped with spindle drive LES 4

- Aluminum shaft mounting profile W 75 x H 75 mm, and it is also naturally anodized
- Clamping surface and underside of milled profile
- Equipped with 2 precision steel shafts Ø 12 h6, material Cf53, and hardness of 60 ± 2 HRC
- Aluminum shaft slide WS 5/70 or 2 x WS 5/70 (L 70 mm), adjustable without clearance, centered Lubrication
- Ball screw drive equipped with 2.5 / 4 / 5 / 10 / 20 mm gradient
- Profile sealing equipped with abrasion-resistant sealing lips
- Die-cast aluminum endplates
- Equipped with 2 limit and/or reference switches, with a repeat accuracy of ± 0.02 mm
- Sealed angular contact ball placed inside of the drive steel flange

Options

- Black anodized aluminum profile
- Electromagnetic brake located inside the motor module or as extension of the drive spindle
- Steel slide
- Mounting kit equipped with an external limit switch (see accessories)

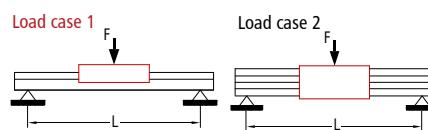

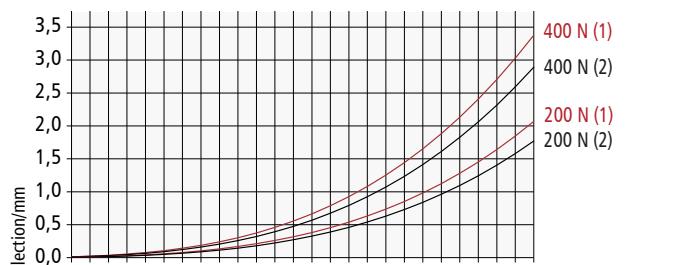

Upon request:

- Length measurement system
- Bellows cover
- Assembly on the left side of the motor module

Mounting kit is equipped with bevel gear

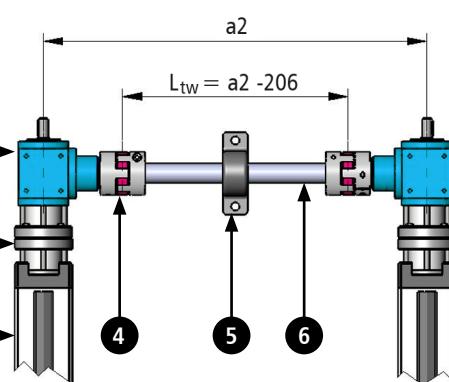

Installation options

Coupling housing set 90°

Coupling housing set 0°

Order data

Mounting kit is equipped with bevel gear

It is equipped with H-construction
LES 4 / LES 6 / LES 5,
Mounting 0°

Scope of delivery: 2x①, 2x②, 2x④
Item-Number: 216150 0001

In case of an H-construction for
LES 4 / LES 6 / LES 5,
Fastening 90°

Scope of delivery: 2x①, 2x②, 2x④
Part No.: 216150 0002

Transmission shaft

Hollow shaft of Ø 25 mm x 4 mm,
blank 1000 mm
Part No.: 219001 0125

Hollow shaft of Ø 25 mm x 4 mm,
blank 2000 mm
Part No.: 219001 0225

Coupling/Pillow Bearing

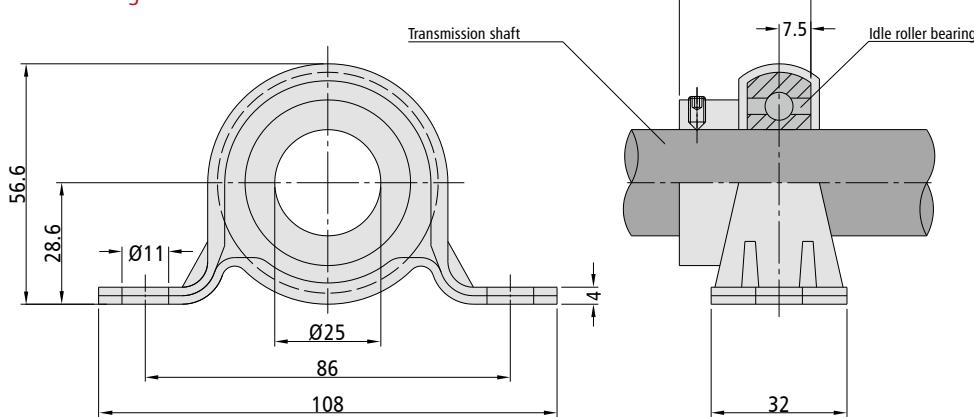

Coupling for transmission shaft
Conversion is done from 12 to 25 mm,
2 pcs.
Part No.: 218050 0002

Pillow bearing for the transmission shaft
PU 1 piece
Part No.: 896202 5562

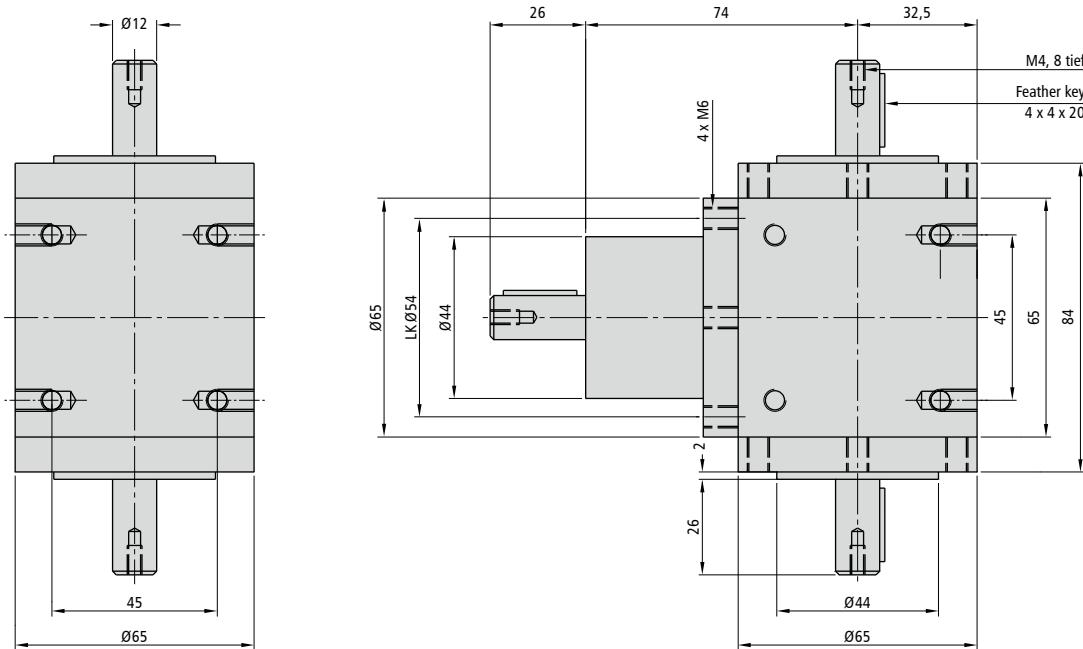

Dimensional drawing

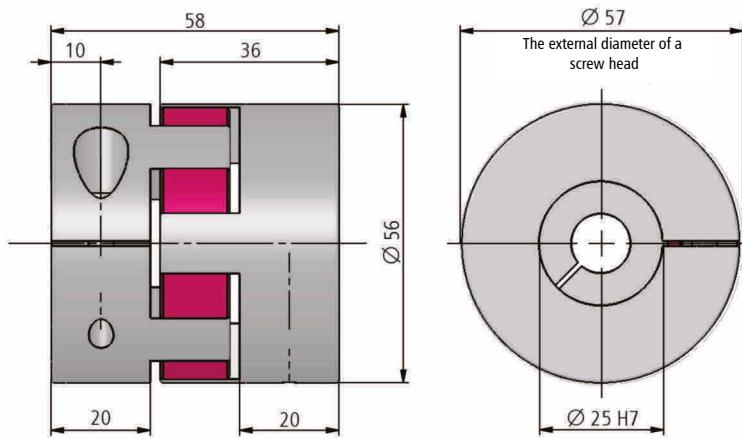

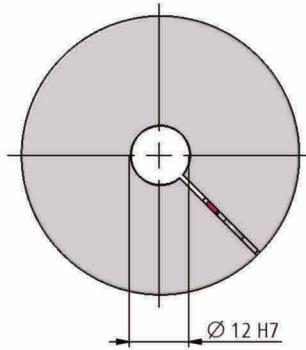

Pillar bearing

Angle drives

Coupling

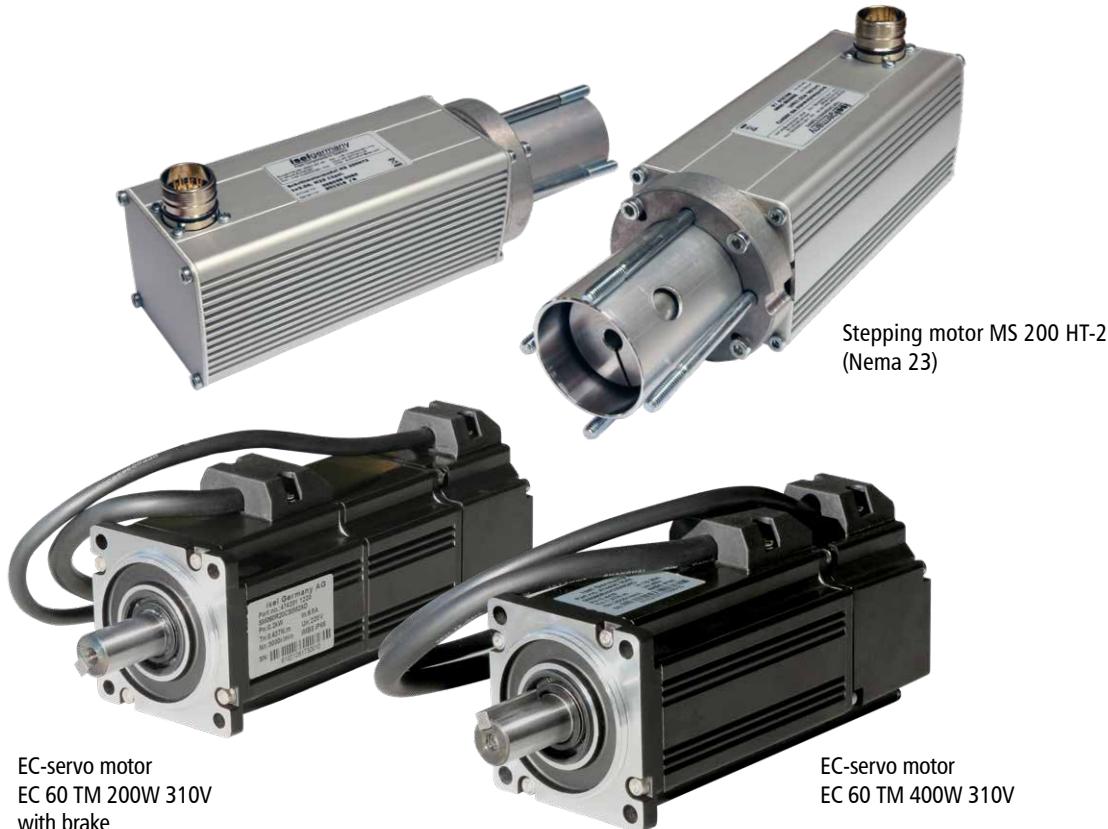

Technical data

Pillow block bearing is placed
to avoid vibrations and to support the transmission shaft
(recommended from a shaft length of 1500 mm)

Transferrable Torque	18 Nm
Body Weight of Coupling	0.3 kg
Weight of the shaft	0.540 kg/m
Moment of inertia of both couplings	2.68" 10^{-4} kg m ²
Moment of inertia of the shaft	8.171" $10-6$ kg m ² /100 mm

Precisely with high dynamics throughout long distances

The linear units equipped with toothed belt drives are the first choice when it comes to high speeds and long travel distances, thanks to the precise positioning and high repeat accuracy in the areas of handling, assembly automation and machine handling. The compact and flexible modules turn on greatly dynamic movements, and that is why short cycle times do not require big investments.

The linear units are, therefore, the best for both fast handling-positioning tasks, and for performing light to medium-heavy loads. The modules are designed of extruded aluminum casing profiles, linear rail guides are based on the recirculating ball principle equipped with shaft slides or roller guides. Different versions of the linear units, which are equipped with toothed belt drive, provide our customers a large variety of products. Since there are countless varieties of accessories and due to the modular design, we can also adapt linear units to your individual demands or combine them together into multi-axis systems.

Functional overview – linear unit equipped with toothed belt drive

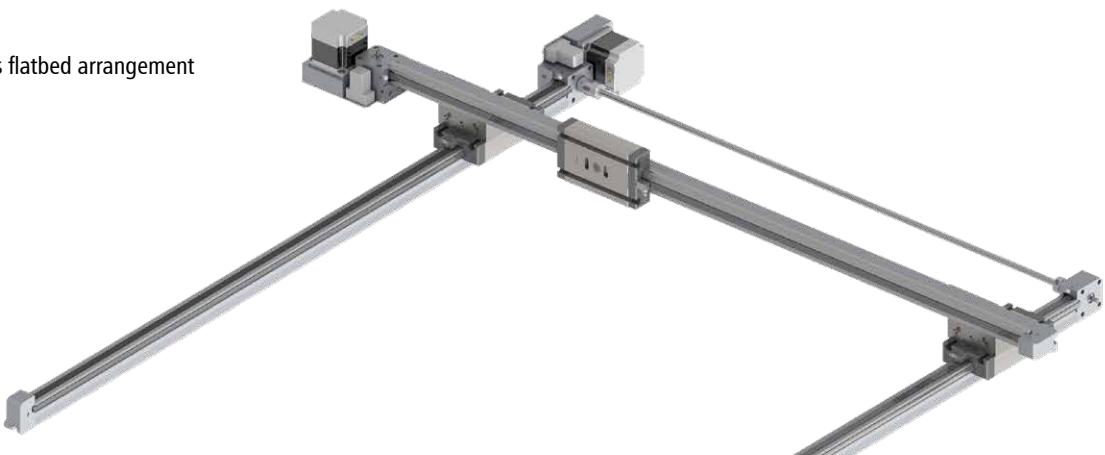

Combination examples

LEZ 1

- 2-axis flatbed arrangement

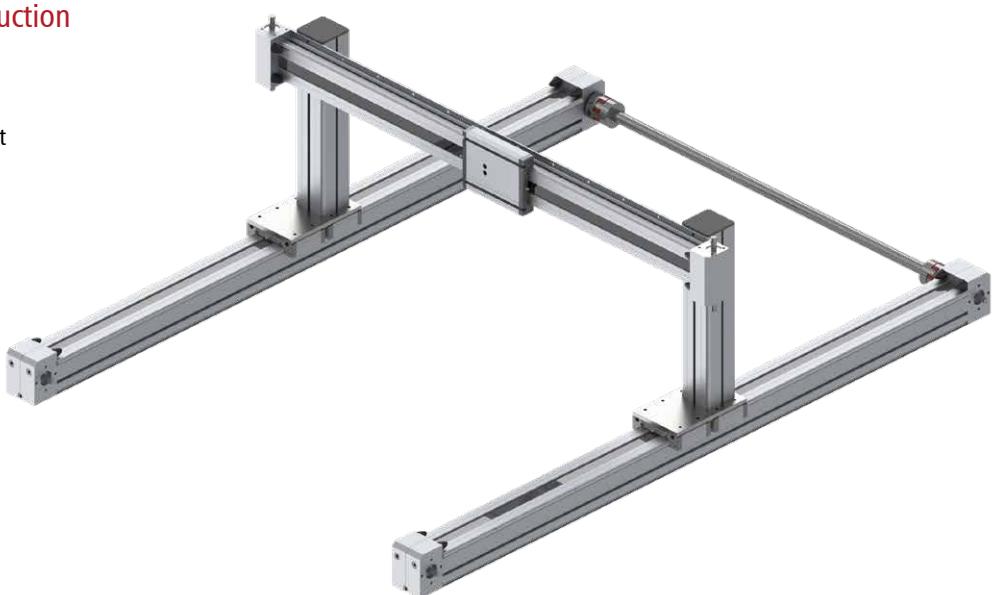

XY stage LEZ 1

- 2 x LEZ 1
- 1 x connection plate

2-axis H-construction

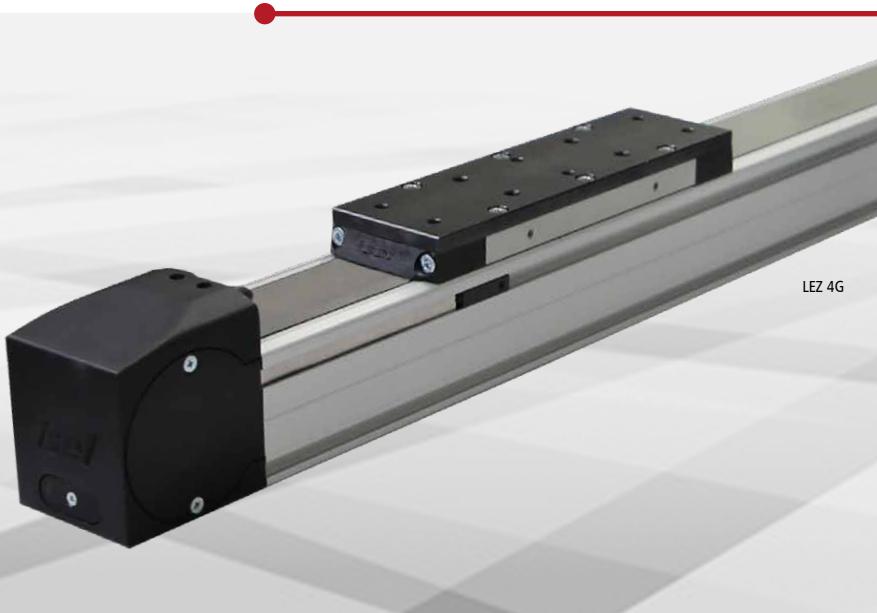

- 2 x LEZ 3
- 1 x LEZ2
- Transmission shaft

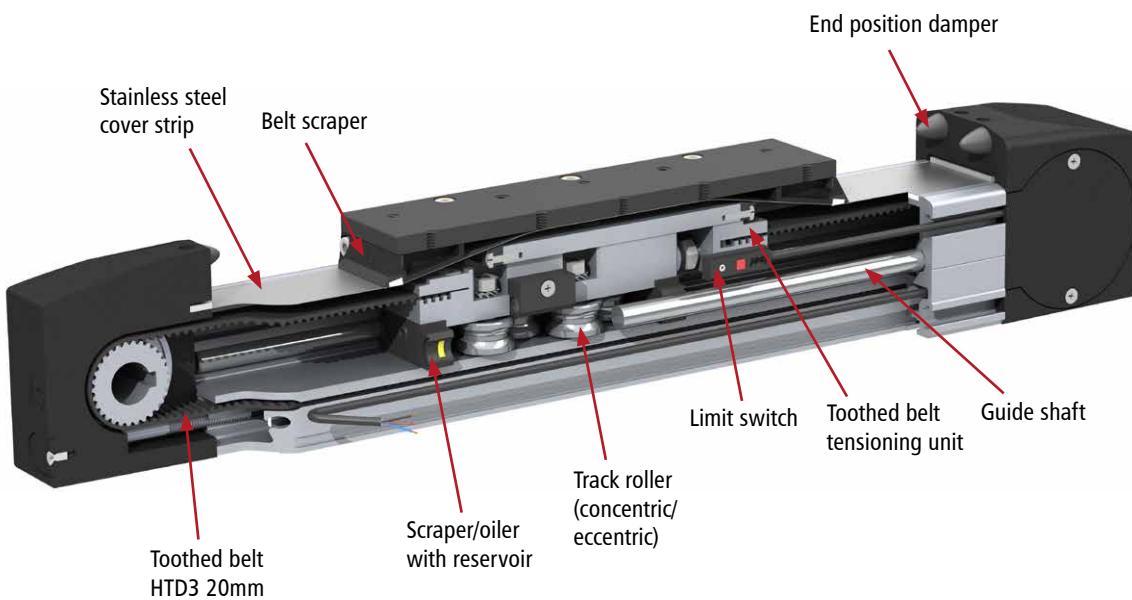

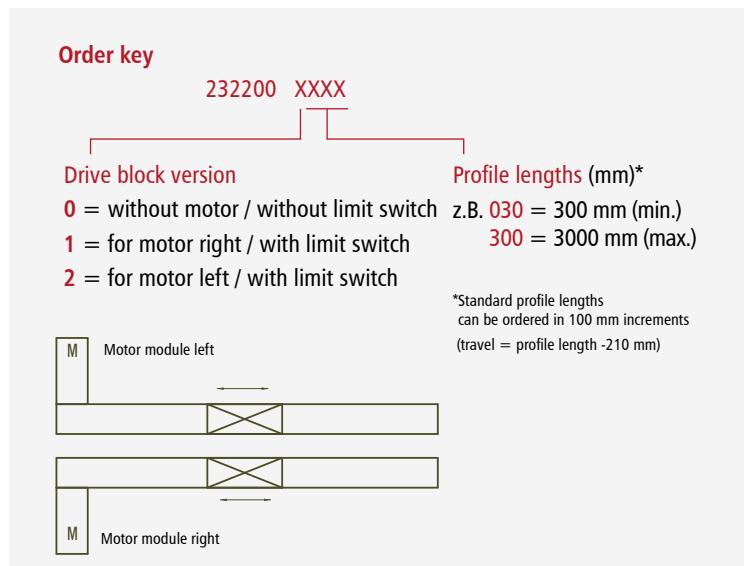

Linear unit equipped with toothed belt drive LEZ 4G

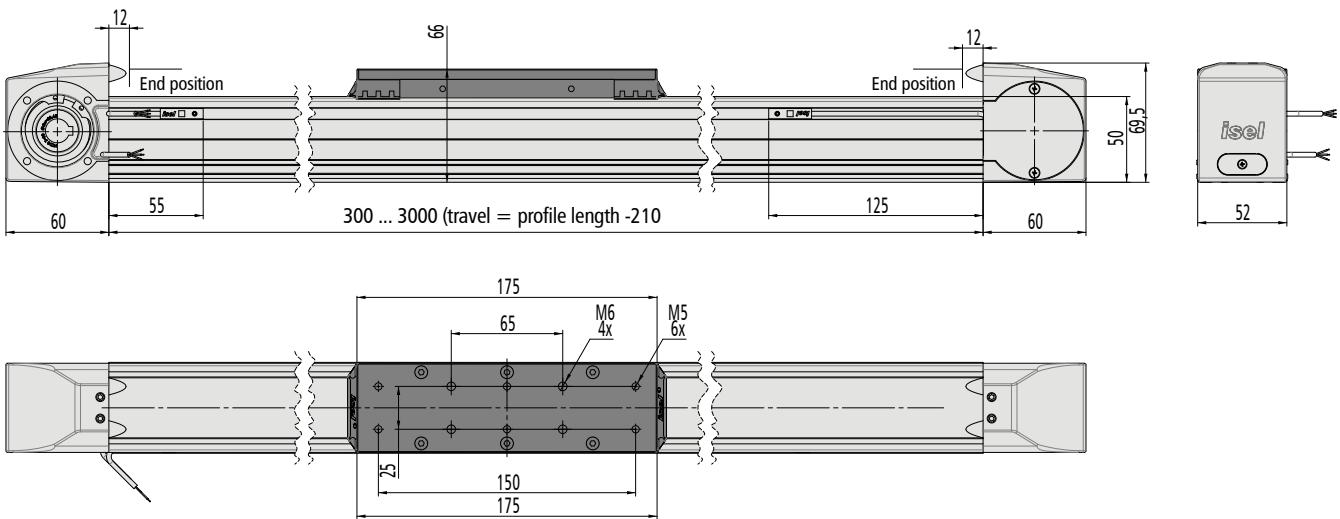

- Stainless steel cover as standard
- External limit switch sensors as standard
- Feed speed up to 5 m/sec
- Repeat accuracy +/- 0.2 mm
- Standard length up to 3 m
- Feed per revolution 90 mm
- Planetary gearbox 1:3
- Direct motor adaptation via hollow shaft
- Motor connection for flange 60 mm

Options:

- Special lengths and other reduction ratios on request

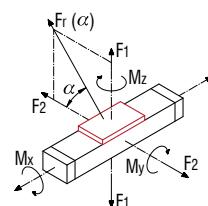

Technical data

Belt typ	HTD 3M, width 20 mm
Weight without drive module	1000 mm = 7,75 kg
Specific mass of the toothed belt	0,05 kg/m
Carriage weight	0,85 kg
Specific guide weight	0,280 kg/100 mm
Feed per revolution	90 mm
Mass moment of inertia of the synchronizing pulleys	0,000011 kgm ²

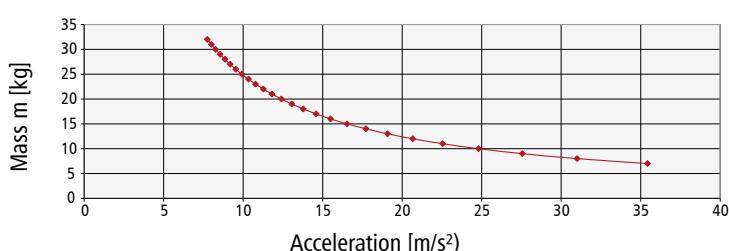

Load data

$$F_r(\alpha) = \frac{F_2}{\cos \alpha}$$

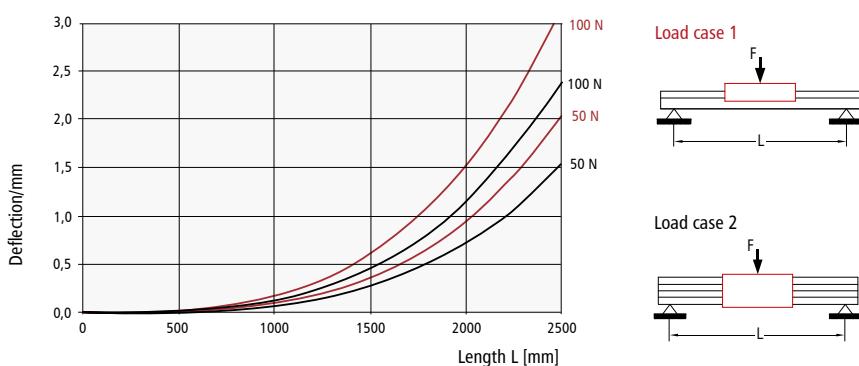

$$F_r(\alpha) = \frac{F_1}{\sin \alpha}$$

Connection flange for alternative motors

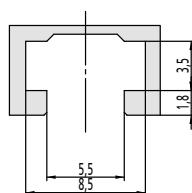

Accessories | LEZ 4G

Mounting set Connection bracket
for LEZ 4G

Part no. 290022 0002

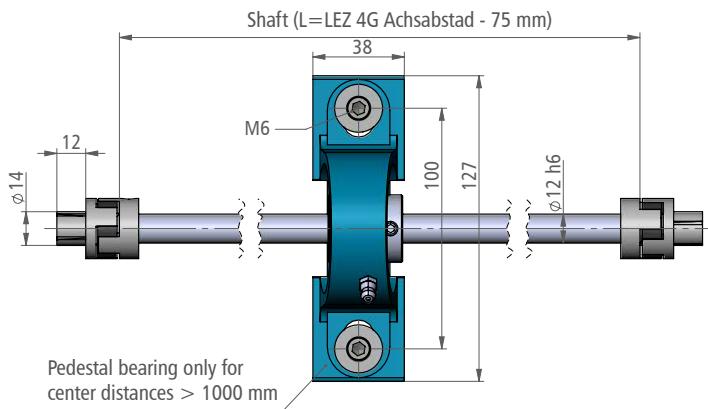

Square nut
M5, DIN 562 8x8mm,
galvanized steel
Part no. 892164 0000

Transmission shaft

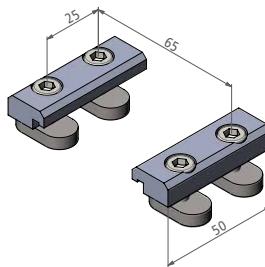

- prepared in lengths of 1 m and 2 m
-> d= 12mm
- Mechanical connection via two hollow shaft couplings included in the scope of delivery
- Center distance < 1m Part no. 219002 1000
- Center distance > 1m Part no. 219002 2000 (including pedestal bearing)

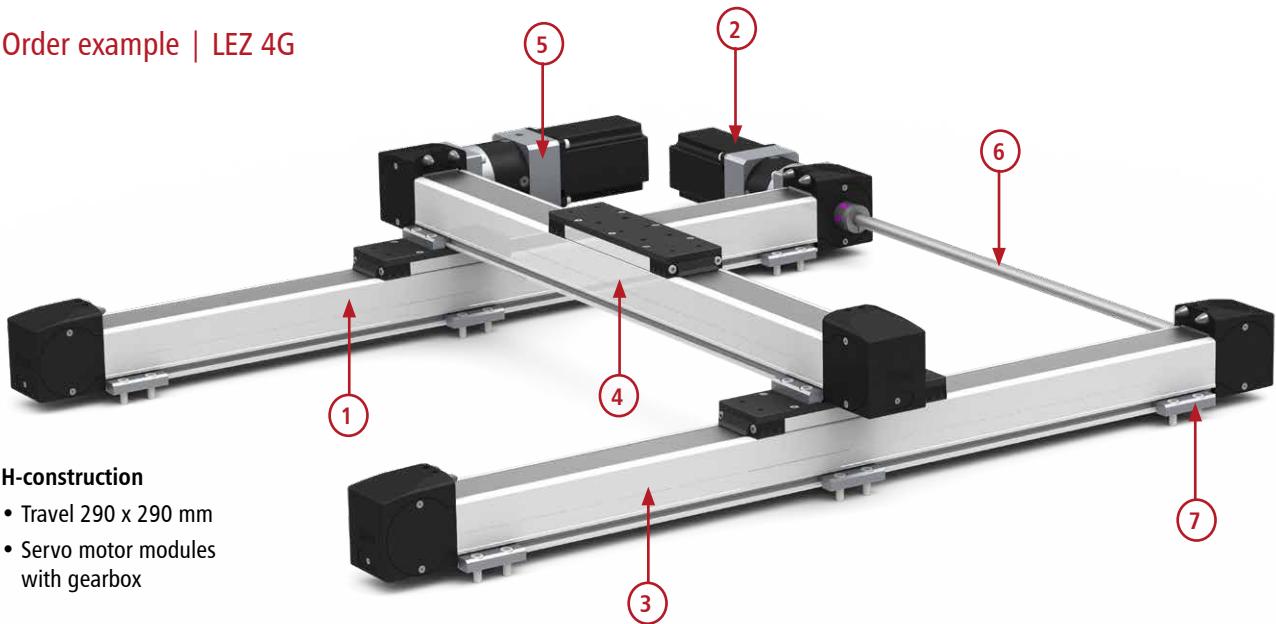

Clamping claws

- for attaching the axle to the mounting plate and for axle combinations
- threaded holes suitably prepared for mounting an H-construction
- PU = 10 pieces, incl. screws and sliding nuts

Part no. 290022 0001

Order example | LEZ 4G

H-construction

- Travel 290 x 290 mm
- Servo motor modules with gearbox

1. LEZ 4G for motor right, with limit switch
Part no. 232200 1500

2. Servo motor module with gearbox
Part no. 396421 9062X

3. LEZ 4G without motor, without limit switch
Part no. 232200 0500

4. LEZ 4G for motor left
Part no. 232200 2500

5. Servo motor module with gearbox
Part no. 396421 9062X

6. Transmission shaft < 1 m, incl. couplings
Part no. 219002 1000

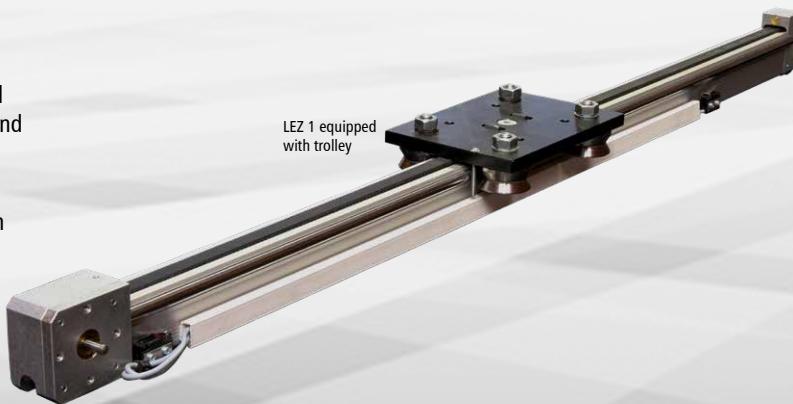

7. Clamping claws for LEZ 4G, PU 10 pieces
Part no. 290022 0001

Ask for your individual offer.

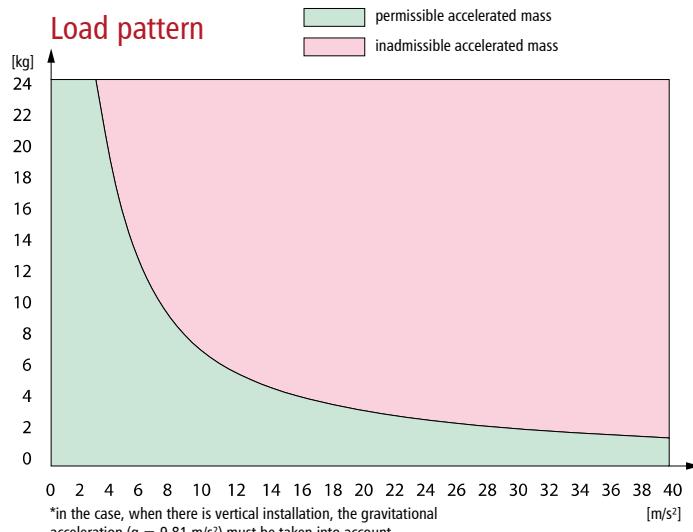

Linear unit equipped with toothed belt drive LEZ 1

- Aluminum profile,
Miniature linear guide LFS-8-2
- Clearance-free feed is equipped with toothed belt drive toothed belt with 3 mm gradient and width of 9 mm
- Feed per rotation: 60 mm
- Repeatability less than or equal to ± 0.2 mm
- Maximum feed of 1.5 m/s
- Overrun limit switch is equipped with connection cable
- Mechanical limit switches

Options:

- Special lengths in grid size of 100 mm upon request, maximum size - 6,000 mm
- Fastening done via integrated threaded rail M6, grid size of 50 mm
- Stepping motor drive module of 50Ncm, SubD Part No.: **396049 3010L**
- Reed sensor

Technical data

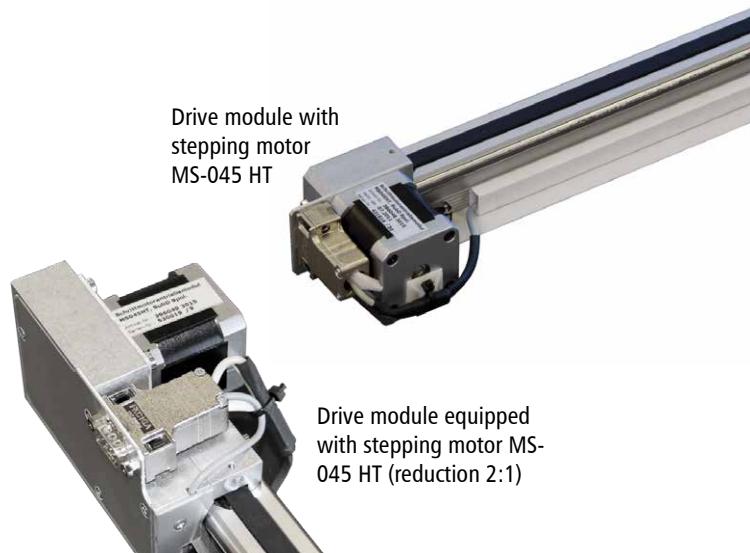

Belt type	HTD 3 M, width 9mm
Slide weight	0.430 kg
Weight without drive module	1000 mm = 3 kg
specific mass of the toothed belt	0.0225 kg/m
Carriage weight	1.03 kg
specific guidance on weight	0.200 kg/100 mm
Feed per rotation	60 mm
Effective diameter of the synchronizing pulleys	$\varnothing 19.10$ mm
Mass moment of inertia of the synchronizing pulleys	5.585×10^{-7} kg m ²

Linear unit equipped with toothed belt drive LEZ 2

- Aluminum profile, with miniature linear guide LFS-8-5
- Clearance-free feed is equipped with toothed belt drive toothed belt with 5 mm gradient and width of 25 mm
- Maximum feed of 5 m/s
- Shaft slide WS 3, L 176 x W 130 mm
- Feed per rotation: 70 mm
- Repeatability less than or equal to ± 0.2 mm
- available in lengths up to 6,000 mm
- Overrun limit switch is equipped with connection cable
- Mechanical limit switches

Options:

- Special lengths in grid size of 100 mm upon request, maximum size - 6,000 mm
- Also as a direct drive, which is equipped with a stepping motor servo motor
- inductive limit switches

Customized special applications

Mechanical components from isel Flexible & highly efficient

The custom-made product shown here for engraving brass instruments is based on an aluminum base frame, which impresses with its robustness and durability and forms the foundation for a high-precision axis system.

A 3-axis cantilever arrangement consisting of our LES 5 and LES 6 linear units with servomotors forms the heart of the system.

The workpiece is manually fixed on an LES 6 using a handwheel and brought into the desired position by a controlled RDH-M rotation unit. The system is operated via the user-friendly iOP-19 control panel, which was mounted on a mobile stand at the customer's request.

The program is processed using ProNC, an advanced software solution that is renowned for its performance and user-friendliness.

Fig.: „Engraving machine“ for Buffet Crampon

Do you also have an application for which you need our expertise?

Together with our design department and our sales team, we will find a customized solution for you.

Rotary indexing tables / rotary axes

The multi-dimensional processing of a wide variety of workpieces and materials often requires rotary indexing tables and rotary axes as the fourth or fifth axis in addition to the three-axis CNC machine.

Whether for small components or higher loads - the maintenance-free isel rotary axes are popular with designers for a wide range of applications and machine sizes. Useful, easy-to-mount accessories such as chucks, T-slot plates and tailstockunits reliably fix the workpiece. Rotary indexing tables and rotary axes are available in different configurations and can be easily retrofitted into existing systems as well.

Tailstock unit RE-M

Rotary swivel unit type DSH-S

- Equipped with precision gear
 - heavy duty and stiff output bearing
 - Clearance-free and high torsional rigidity
- equipped with rotary axis type RDH-S
- Reduction ratio of 1:51 oder 1:101
- Stepping or servo motor
- Degree of protection IP 65
- Stainless construction
- Transmission accuracy <1.5 arcmin
- Repeatability < ±6 arcsec
- Maintenance-free
- Infinitely adjustable swivel range

The proper guide for every machine

High rigidity, load capacity for dynamic traversing and positioning movements, long-term accuracy and low-noise operation: The modern isel linear guide systems made of aluminum with non-rotating precision steel shafts meet the high performance requirements needed for the construction and operation of machines.

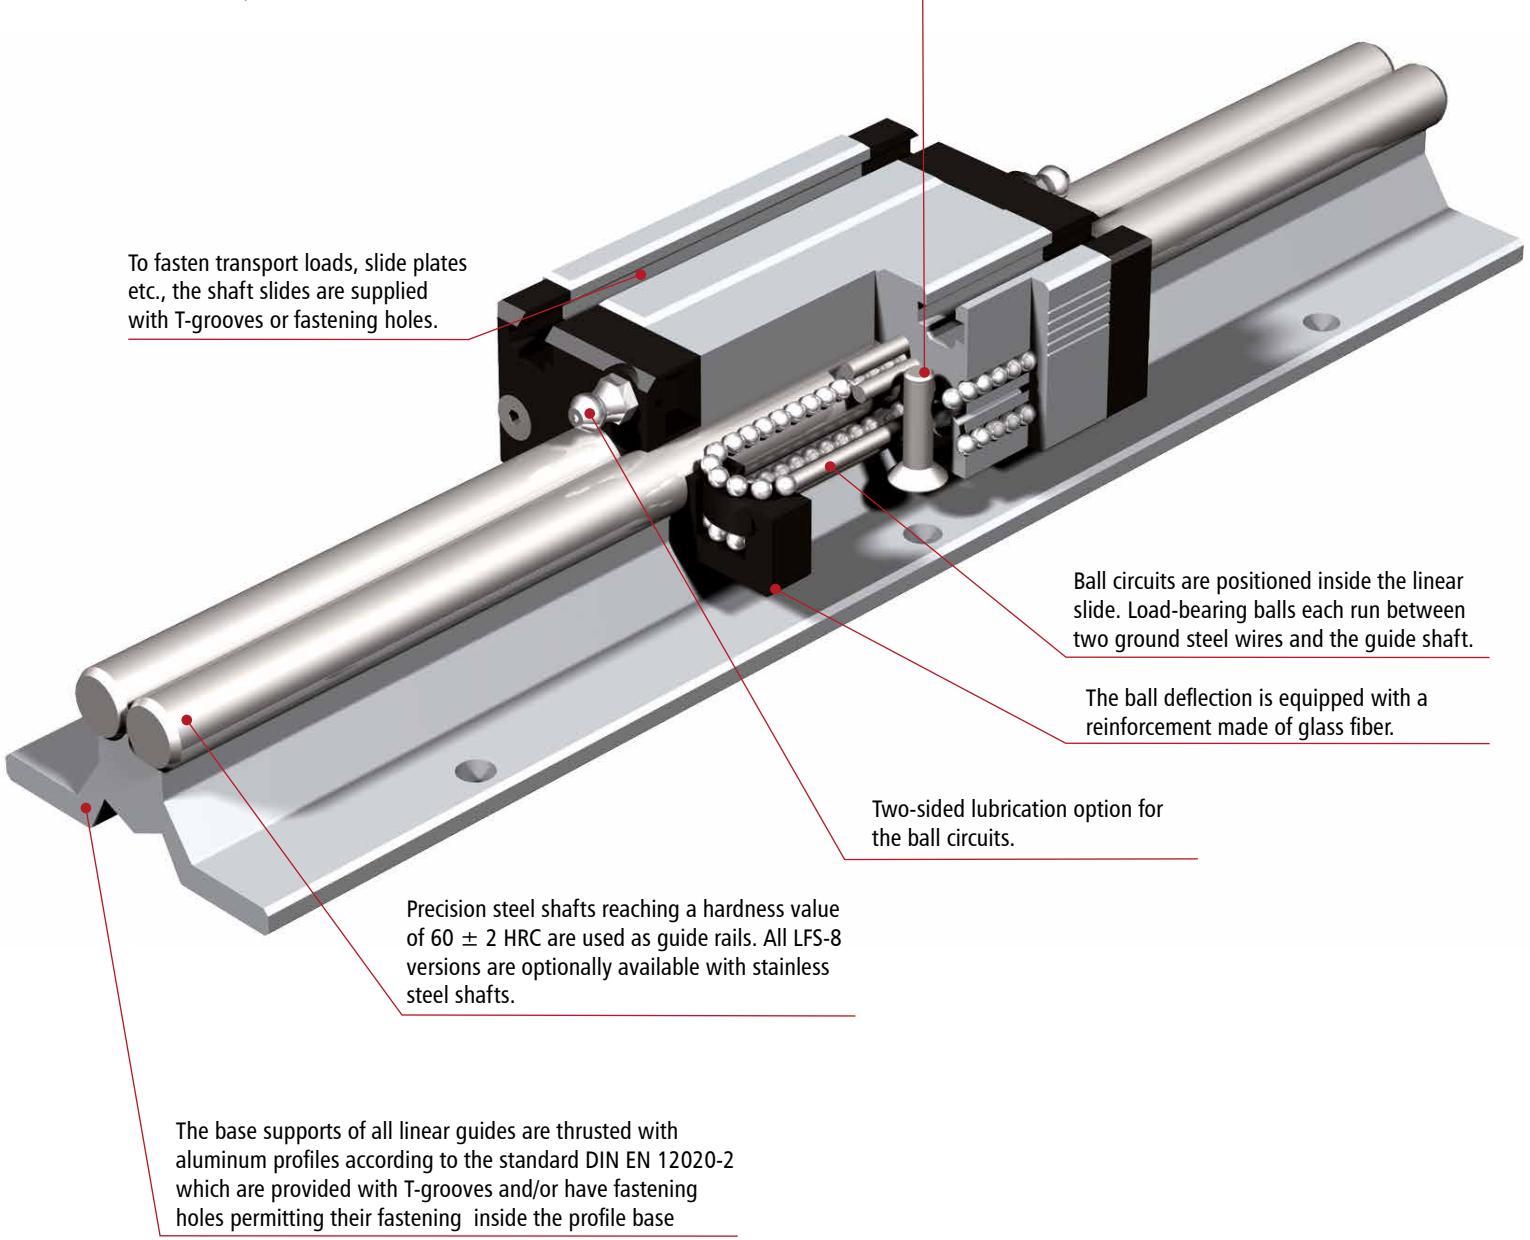

In combination with the ball-guided carriages or roller-guided carriages offered in various designs and with an extensive range of accessories, the product range offers solutions for many potential applications and the construction of complex multi-axis systems.

Aluminum shaft slide

The shaft slides manufactured by isel are ideal for the set-up of complex multi-axis systems for handling and processing. Many application areas are covered by a wide range of models.

All models can be manufactured with different profile lengths (of 70, 100, 150, and 200 mm)

The adjustment of the slide is carried out by means of self-locking adjusting screws. For this purpose, the rows of balls and shafts or wires are set against each other and consequently pre-stressed. The carriages are set to the respective pre-loads at the factory. As an option, all shaft slides are available in a stainless version.

Load capacity and life-time

Assembly position

Generally speaking, the assembly position of the linear guides can be freely selected. What must be considered is just the fact that all exercised forces and moments are below the maximum values for the respective axes.

Temperatures

All linear guides are designed for continuous operation in ambient temperatures of up to 60 °C. In short-term operation, temperatures of a maximum of 80 °C are permissible. The linear guides are not suitable for temperatures below freezing.

Straightness / Torsion

The aluminum profiles used are extruded profiles, which due to the manufacturing process show deviations in terms of straightness and torsion. The tolerance of this deviation is defined according to the standard DIN EN 12020-2. In the worst case, the deviations of the linear guides correspond to these limit values. However, they are usually undercut. In order to achieve the desired guide accuracy, it is necessary to carry out the alignment of the guide by means of leveling plates and/or to clamp it on a suitably precisely machined support surface. In this manner, tolerances of 0.1 mm/1000 mm can be achieved.

Fundamentals of load capacity and service life

The dimensioning of a linear guide is based on the load capacity of the single elements. The carrying capacity is described by:

- the dynamic load rating C
- the static load rating C₀
- the static moments M_{0X}, M_{0Y} and M_{0Z}

The basis of the dynamic load ratings according to the DIN standard is a nominal service life of 100,000 m displacement. Suppliers from the Far East often state the load ratings for a nominal service life of 50,000 m; this results in load ratings which are 20% higher than the ratings according to the DIN standard.

Dynamic Capacity

The fatigue behaviour of the material determines its dynamic load capacity. The service life - the fatigue period - depends on the following factors:

- the load of the linear guide
- the travel speed of the linear guide
- the statistical randomness of the first occurrence of damage

Service life

The service life is understood to mean the service life which is actually achieved by a linear guide.

The service life may deviate from the calculated service life. The following situation can result in a premature failure due to wear or in fatigue:

- An existing misalignment between the guide rails or the guide elements
- The soiling of the guide rails
- Insufficient lubrication
- Oscillating movement with very small strokes (corrugation)
- Vibrations during the shutdown (corrugation)

Because of the variety of the assembly and operating conditions, it is not possible to determine the service life of a linear guide exactly in advance. The surest way to obtain an accurate estimate of the service life is still a comparison with similar assembly cases.

Linear guide rail type LFS-8-1 / LFS-8-2

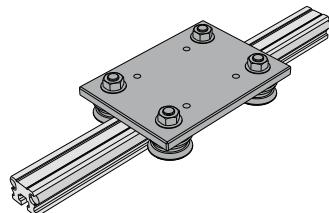

Linear guide rails

- W 30 x H 20 mm (LFS-8-1)
W 30 x H 32.5 mm (LFS-8-2)
- 2 precision steel shafts Ø 8 mm
- twist-proof
- Aluminum shaft mounting profile, natural anodized
- Fastening from below by using M6 threaded rails in the T-slot indentation
- Conditionally self-supporting
- Special lengths offered upon request
- Weights: approx. 1.6 kg/m (LFS-8-1)
approx. 2.0 kg/m (LFS-8-2)

Options:

- Stainless construction
- Equipped with through-holes for M6 (this applies only to the type LFS-8-1)

Carriage

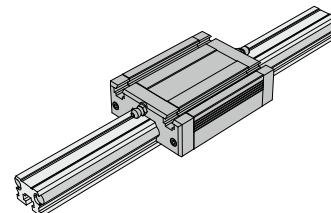

LW 6

- L 125 x W 90 x H 7.7 mm
- Ground steel plate
- 4 rollers Ø 31 mm, lubricated over the entire service life
- Clearance-free adjustment possible
- Weight: approx. 1 kg

Part No.: **223011**

Slide made of aluminum

- Equipped with a recirculating ball guide
- Milled clamping surface
- T-slot inserts M6
- Central lubrication option
- Clearance-free adjustment possible

Option:

- Stainless construction

WS 1/70

- L 96 x W 72 x H 28.5 mm
 - Weight: approx. 0.4 kg
- Part No.: **2231000070**

Linear guide rail type LFS-12-11

Linear guide rail

- W 20 x H 31 mm
- Precision steel shaft Ø 12 mm
- Aluminum shaft mounting profile, natural anodized
- Fastening from below by using M6 threaded rails in the T-slot insert on a flat surface
- Special lengths offered upon request
- Weight: approx. 1.3 kg/m

Carriage

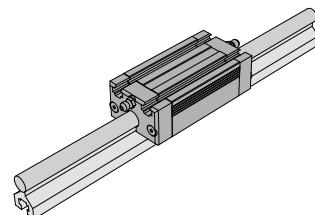

LW 5

- L 110 x W 75 x H 7.7 mm
- Ground steel plate
- 4 rollers Ø 31 mm, lubricated over the entire service life
- Clearance-free adjustment possible
- Weight: 0.81 kg

Part No.: 223010

Slide made of aluminum

- Equipped with a recirculating ball guide
- T-slot inserts M6
- Central lubrication option
- Clearance-free adjustment possible

Option:

- Stainless construction

WS 6/70

- L 96 x W 50 x H 31.5 mm
- Weight: approx. 0.3 kg

Part No.: 223106 0070
Stainless: 223106 1070

WS 6

- L 126 x W 50 x H 31.5 mm
- Weight: approx. 0.5 kg

Part No.: 223106 2060
Stainless: 223106 1000

- 10 x 4 mm
- galvanized
- M6 Ra 50 mm
- PU 3 pieces per 1 m

Part No.: 209011 (figure 9)

Sliding nut M6

- L 25 x W 10 x H 3.5
- galvanized
- PU 100 pieces
- For all T-slots except
aluminum profiles:
PT / RE 40, 65

Part No.: 209001 0005 (figure 6)

Sliding nut M6

- L 25 x W 13 x H 5
- galvanized
- PU 50 pieces
- for all T-slots:
PT / RE 40, 65

Part No.: 209004 0001 (figure 6)

Sliding nut 2 x M6

- L 45 x W 10 x H 3.5
- galvanized
- PU 50 pieces
- For all T-slots except
aluminum profiles:
PT / RE 40, 65

Part No.: 209002 0004 (figure 5)

Sliding nut 2 x M6

- L 45 x W 13 x H 6
- galvanized
- 2 x M6 Ra 25 mm
- PU 25 pieces
- for all T-slots: PT / RE 40, 65

Part No.: 209005 0001 (figure 5)

Angle sliding nut 2 x M6

- galvanized
- PU 25 pieces
- For all T-slots except
aluminum profiles:
PT / RE 40, 65

Part No.: 209021 0003 (figure 7)

Special angular sliding nut 3 x M6

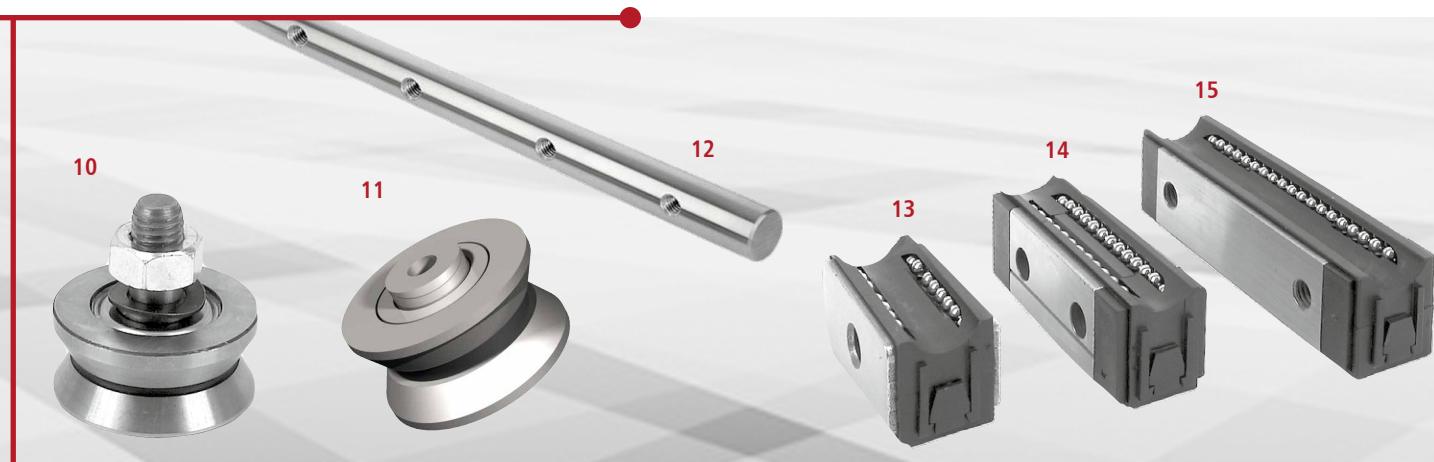

- galvanized, PU 25 pieces
- For all T-slots except
aluminum profiles:
PT / RE 40, 65

Part No.: 209022 0003 (figure 8)

T-nuts M6

- DIN 508
- Strength 10
- PU 20 pieces

Part No.: 209119 0003 (figure 10)

Roller Ø 21 mm

- concentric
- PU 2 pieces

Part No.: 222003 (figure 10)

- eccentric
- PU 2 pieces

Part No.: 222004 (without figure)

Roller Ø 31 mm

- concentric
- PU 2 pieces

Part No.: 222006 (without figure)

- eccentric
- PU 2 pieces

Part No.: 222007 (without figure)

Roller Ø 20 mm for SF 12

- with threaded hole M4
- PU 2 pieces

Part No.: 222010 (figure 11)

Guide shaft SF 12 / SF 16

- Precision steel shaft
Ø 12 and/or 16 mm, length 3 m
- Hardened and ground
- Equipped with blind hole thread M5 (SF12) or M6 (SF16) in a 100 mm grid or with through hole for M4 (SF 12) or M5 (SF 16) inside the grid of 100 mm

Part No.: 220019 XXXX (figure 12)

(SF12, 3m, with blind hole M5 inside the grid of 100 mm)

Part No.: 220020 XXXX (without figure)

(SF12, 3m, with stepped bore for special screws M4 inside the grid of 100 mm)

Part No.: 220023 XXXX (without figure)

(SF16, 3m, with stepped bore for special screws M5 inside the grid of 100 mm)

Part No.: 220024 XXXX (without figure)

(SF16, 3m, with blind hole M6 in the grid of 100 mm)

Linear ball bearing (for steel shafts Ø 12 mm)

Linear ball bearing small

- L 40 x W 20 x H 19 mm
- PU 2 pieces

Part No.: 222001 (figure 13)

Linear ball bearing medium

- L 60 x W 20.5 x H 17.8 mm
- PU 2 pieces

Part No.: 222000 (figure 14)

Linear ball bearing large

- L 80 x W 20 x H 19 mm
- PU 2 pieces

Part No.: 222002 0001 (figure 15)

Universal grease

Part No.: 299031 (without figure)

Impact gun for grease

Part No.: 931170 (without figure)

Profile rail guide type PSF 15, 20, 25 and 30

Features

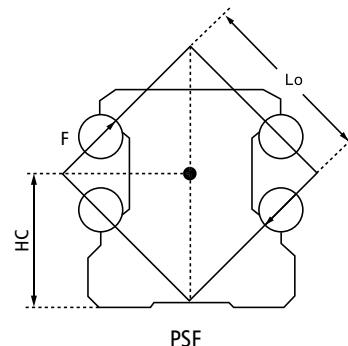

- High rigidity
- Excellent dynamic characteristics: $V_{max} > 10 \text{ m/s}$, $a_{max} > 450 \text{ m/s}^2$
- High static and dynamic moment loads possible
- the same load ratings for all load directions.
- The guide rails can be screwed on from above (screw head countersink) and from below (thread)
- special surface coatings are possible

Frame size	Lo [mm]	Hc [mm]
PSF 15	12.4	9.35
PSF 20	16.4	12.5
PSF 25	19.5	14.5
PSF 30	24.0	17.0

PSF – profile rail guide

The PSF linear guides are designed with four raceways in an O arrangement. The precision steel balls transmit forces introduced at a contact angle of 45 degrees (see the sketch here in the following). The O arrangement provides a high level of torsional rigidity.

In order to achieve an ideal level in terms of load ratings and rigidity, the greatest possible number of steel balls were used despite the limited space availability. This means that high static and dynamic moment loads are feasible. The same load ratings apply to all load directions with a compact design.

Ecological lubrication system (Eco-System):

The embedded lubrication reservoir supplies the rolling elements directly with the lubricant. This function allows the lubrication intervals to be extended in a considerable manner. The Eco-System is particularly effective for the short-stroke use.

More information concerning the designs, dimensions and ordering options can be found in the PSF linear guides catalogue as well as in the online shop on the website www.isel.com.

PSF LINEAR GUIDES

isel^{*} ... successful with
CNC TECHNOLOGY

Manual clamping element

Note:

Can be used for ball guide rails.

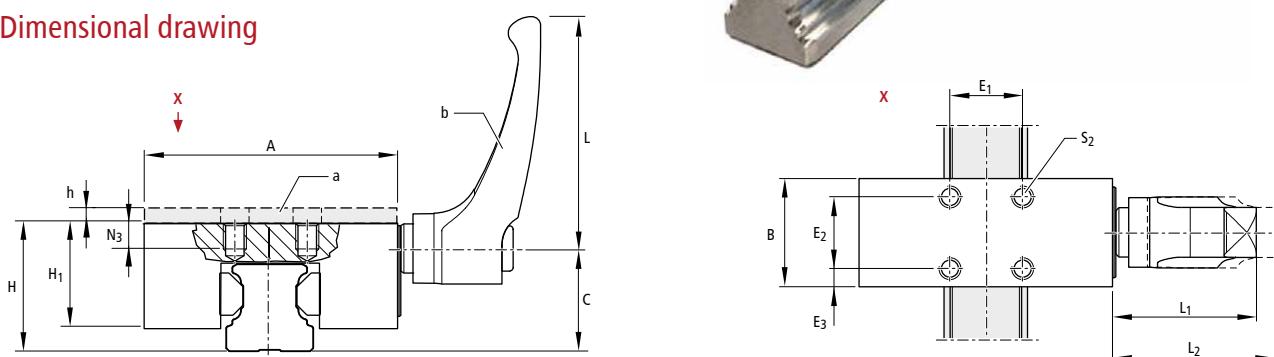

Assembly note:

Operating temperature range between 0 and 70 °C

Pay attention to a rigid connection construction.

Dimensional drawing

Precision is our drive

Our technically sophisticated ball screw drives are high-precision mechanical drive elements for many areas of technology and mechanical engineering, which have proven themselves successfully in demanding industrial practice for decades. The principle of the ball screw drive is very simple. And yet the requirements and designs of the drive solution are so diverse in their practical applications.

With our product range, we offer you a suitable drive solution for practically every movement task - regardless of the requirements for pitch, speed, rigidity, precision, service life and reliability. We specialize in providing you with an adequate solution for your application.

Information

The ball screw nuts of the **company isel Germany GmbH** are of high quality, precise and wear-resistant (hardened and ground). Together with the ball screw spindles, they convert rotary movements into linear movements by producing an extremely low friction-level.

The ball screw nut is inserted into the respective clamping block and positioned and fastened by means of a stud bolt. The ball screw nuts have multiple ball circuits equipped with an internal ball return.

A set screw on the clamping block allows the run of the ball screw spindle to be adjusted without any clearance.

The repetition accuracy is less than 0.01 mm over a length of 300 mm. A lubricating nipple is attached to the clamping block for the lubrication of the linear drive.

The ball screw spindles are manufactured on modern machines in a rolled design, and then hardened and polished.

Our linear drives are technically mature and have proven themselves in their practical application for more than 25 years.

Process know-how and vertical integration

Our ball screw spindles are technically mature, powerful and extensively proven through use in automation systems: With ball screw drives, isel Germany GmbH has created a core competence with a lot of know-how in design and production.

With modern production facilities, we carry out all workprocesses (rolling, hardening and polishing) as well as the individual end-processing effectively and customer-specifically in order to offer you the optimal solution for your design task.

Just give us a call to discuss your individual application and possible solutions with us. Our experienced team is always at your disposal for details and questions.

Our design department checks all the technical requirements and coordinates with the production engineers so that your order can be quickly and flexibly integrated into the production process.

We have been manufacturing ball screw spindles on modern CNC-controlled production machines and with robotsupport for more than 25 years. Certified processes, permanent monitoring and

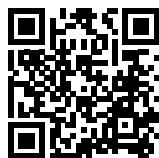

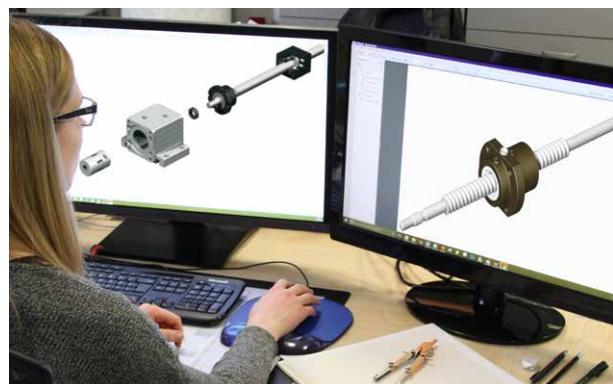

optimization of production processes as well as the most modern 3D measuring machines guarantee consistent quality to meet customer requirements.

Our long-standing customers include companies from the following branches:

- Mechanical and apparatus engineering
- Medical technology
- Electronics industry
- Semiconductor industry

- Wood processing
- Training • and many more...

YouTube

Ball screw spindles Ø 12, 16, 20, 25 mm

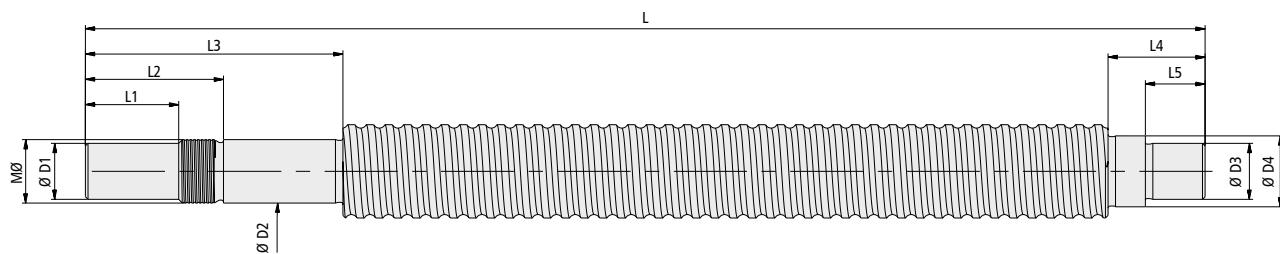

- rolled, hardened, and polished
- Material CF 53, hardened by induction (HRC 60±2)
- Available in lengths of up to 3052 mm (inside the grid of 100 mm, special lengths are available upon request!)
- End processing according to the isel standard or based on customer specifications
- Standard tolerance class according to ISO 7

Order key		Lengths	
Diameter	Spindle gradient	End machining	
2 = 12 mm	2 = 2.5 mm (only for Ø 12,16 mm)	0 = unprocessed	e.g. 045 = 452 mm
3 = 16 mm	3 = 4 mm (only for Ø 16 mm)	1 = one-sided processing	086 = 868 mm
4 = 25 mm	4 = 5 mm	2 = two-sided processing (only for Ø 12, 25 mm)	305 = 3052 mm (shortened by the last digit)
5 = 20 mm	5 = 10 mm (not with Ø 12 mm)	5 = two-sided processing (only for Ø 16, 20 mm) suitable for all feeds (aluminum profile length +78 mm)	6 = 20 mm (not with Ø 12 mm)

See "Available lengths" for permissible combinations.

Strong profiles to be used for many applications

Modular flexibility and highest level of stability

From aluminum square profiles which can be used universally to groove plates flatly milled on both sides and a selection of connection solutions: The modular profile components are coordinated with one another so to offer you a wide range of combination options when it comes to the design of your working environment. By means of the aluminum profiles, complete mounting systems equipped with all needed applications can be designed - according to your requirements.

Light, compact and stable: With a selection of robust aluminum square and round profiles, clamping connections and the range of accessories, the profiles open up every conceivable freedom in the design of ergonomic, efficient and safe working environments. Thick-walled, distortion-free and dimensionally stable: Combine stabilizing rectangular profiles and grooved plates to reach a universal precision, clamping and machining surfaces that can be used in all machines and can be used for conversions and extensions as well if needed.

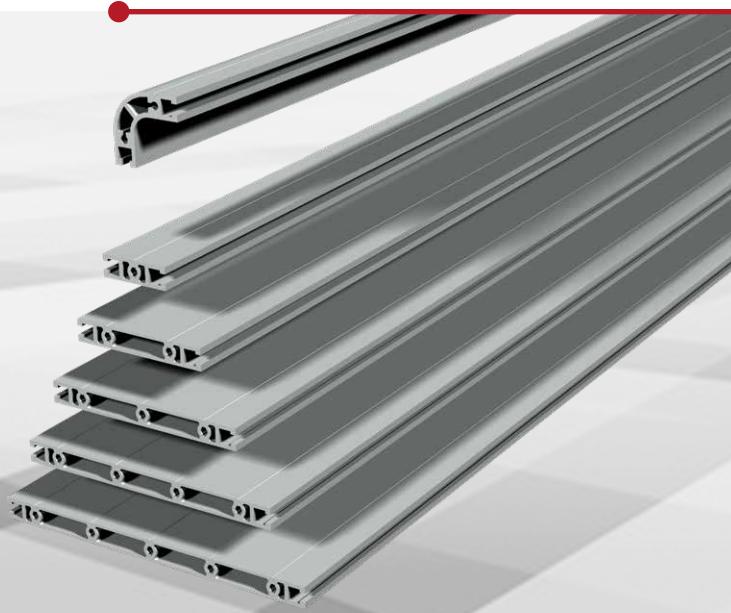

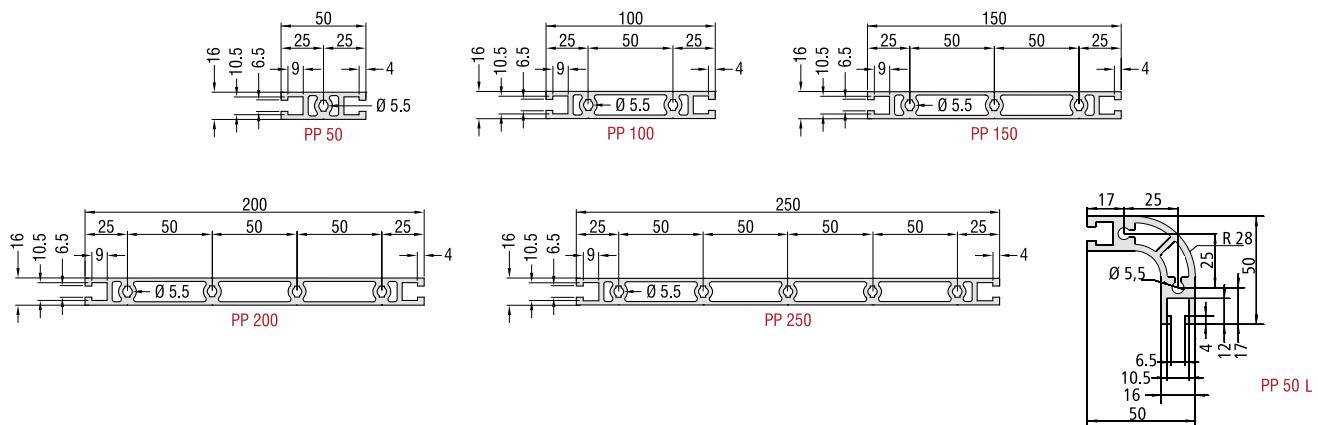

Panel profiles PP 50 - PP 250

- for rapid and easy assembly of frames, tables as well as racks
- Aluminum, naturally anodized
- Manufactured according to the standard DIN EN 12020-2
- light and very strong
- upright, particularly suitable as load-bearing cladding, may absorb higher loads as well
- With our profile connections, very strong connections that are resistant to tension, torsion and bending are produced using profile bores and Allen screws in connection with PS profiles
- Profile cutting upon request

Accessories: see page 108

CNC TECHNOLOGY

CNC control unit iOP-19-TFT / iOP-19-CPU

- Sturdy aluminium housing (standard colour: RAL 7035)
- 19" touchscreen display
- Easy mounting for the keyboard
- User-friendly alignment through the height-adjustable swivel arm
- Simple installation through VESA holder 100/100
- 3 USB ports

Features of the iOP-19-TFT

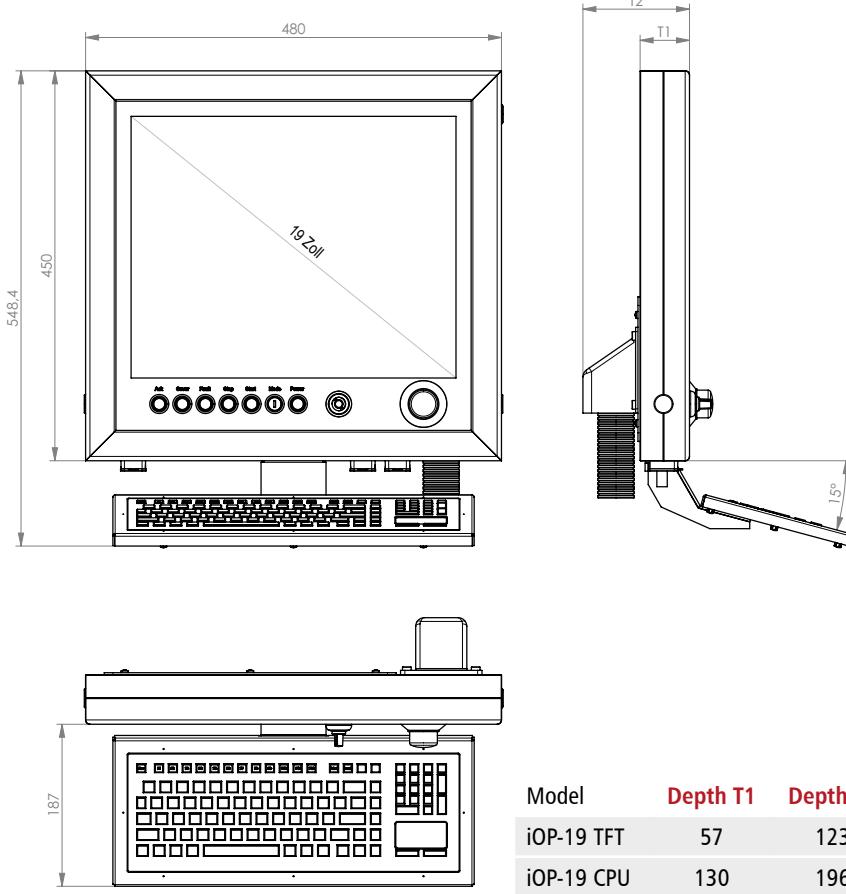

- Degree of protection according to IP 50
- Dimensions (without keyboard): W 480 x D 123 x H 450 mm
- Weight: approx. 15 kg
- Motherboard 64 bit / CPU IntelCore I3
- In addition, a network connection (LAN)
- Dimensions (without the keyboard): W 480 x D 196 x H 450 mm
- Weight: approx. 16 kg

Features of the iOP-19 CPU

The **CNC control units iOP-19** are a revised version of the previous person of the iBP control panel by isel. All experiences were incorporated into the new development of the model iOP-19. They have an integrated touch screen monitor of 19", a silicone keyboard and a control panel equipped with stainless steel buttons and emergency stop switch. A PC can be connected and operated with the model iOP-19-TFT through the standard connecting cables. The iOP-19 CPU is equipped with the isel CAN.

Dimensional drawings

Options

- Simple keyboard and mouse tray
- High-quality mounting keyboard made of silicone (protection: IP68) - in German as well as English- 105 keys, with touchpad
- Stand foot
- Two-hand operation
- RAL 9005 (deep black) or anthracite hammering

Step controller IT 116 Flash

Single-axis controller

The step controller model **IT 116 Flash** is a freely programmable compact controller for a linear or rotary axis equipped with a 2-phase stepping motor. The step controller consists of an intelligent stepping motor output stage, a processor core with flash memory for the download and/or storage of the PAL-PC user program and the clock/direction signal generation for the motor output stage, the required power supplies, a safety circuit (stop category 0 according to the standard EN 60204), as well as a housing equipped with mains input filter and with operating elements.

The integrated operating system in the flash memory of the processor core supports both the

- DNC mode of the controller: PC/laptop permanently connected to the step controller through the serial interface as well as the
- CNC mode of the controller: The step controller independently executes the stored user program without any PC coupling (as stand alone).

Other length upon request.

- Poweroutput stage48 VDC / 4.2A peak for 2-phase stepper motors
- max. 25,600 microsteps / revolution
- Mains voltage: 115 VAC / 230 VAC, 50...60 Hz
- Automatic current reduction to 50% phase current at motor speed < 1 rpm
- Motor current /microstep resolution adjustable with dip switch
- Integrated 32-bit embedded controller (RISC) processor with flash memory for firmware as well as PAL-PC userprogram
- RS-232 interface (front) for coupling with PC /notebook (download of the program)
- Control signals: program start /stop, reset on rear of controller
- 4 opto-isolated signal inputs (signal voltage: 24VDC)
- 4 relay outputs (24VDC, 300mA)
- Control of the motor brake (24 VDC)
- Remote rear controller connector for the external EMERGENCY STOP (2-channel), external power on
- Euro fin housing
- Programming with PAL-PC 2.1 for Win2000, XP, Vista, 7
- Dimensions: W 105 x H 111 x D 320 mm

Scope of delivery

- Controller in cassette housing
- Counter connector (I/O, pulses, remote)
- Serial interface cable (SubD9 - RJ 45)
- Power cord type 230 VAC
- Software CD PAL-PC
- Operating instructions
- Programming instructions

Step controller type iMC-S8

Multi-axis controller

Step controller iMC-S8 as desktop version and with 19" housing

The step controller model **iMC-S8** is a freely programmable compact controller for linear and rotary axes equipped with 2-phase stepping motors. The controller integrates all required components (power supply, safety circuit, power electronics, core processor, interfaces, as well as operating elements), which are required for the control of the single axes up to the complete machine. The said controller is equipped with an intelligent core module, which can be controlled or programmed through an RS232 interface. The core module converts the commands programmed within the user program into clock/direction signals for the connected output stages. According to the used application, the controller type iMC-S8 may be used either in the context of a CNC or DNC operation. In the CNC mode, the processor carries out the CNC program previously created with PAL.PC and then stored within the flash memory the controller is equipped with. In the DNC operating mode, the controller type iMC-S8 is constantly connected to a control computer (PC or laptop) through a serial interface (type RS232). The processing is carried out through the remote control software of the company isel.

- 32-bit RISC processor equipped with flash memory for user program
- Power output stage
 - Step resolution and motor current which can be adjusted through DIP switch
 - Automatic current reduction
- Acceleration, start-stop frequency and step output frequency which are all adjustable
- Both hardware limit switches may be configured
- Door and/or hood control
- External EMERGENCY STOP and POWER connection for integration into higher-level safety circuits
- Connection for external control signals such as e.g.e START, STOP and RESET (CNC mode only)
- Programming/operation
 - PALPC in CNC mode (included)
 - remote (optional: ProNC) in DNC mode
 - by isel @ - format in CNC/DNC mode

Technical data

- 230V connection for the milling spindle (100-230VAC)
- 0 .. 10V analog output for the external frequency converter for the main spindle equipped with a speed control
- Wide range mains input between 100 and 250 VAC, 50..60 Hz
- Processor
 - equipped with flash memory of 128kB, 350 commands may be stored- maximum Step output frequency amounting to 40 kHz
- Power amplifier
 - supply voltage: 48 VDC- Peak
 - current: between 1.0 and 4.2 A (MD 24)
between 2.8 and 7.8 A (MD 28)
 - Step resolution: from 400 to 51200 steps
- Inputs/
Outputs- 16 inputs (24VDC)
 - 16 outputs (24VDC/300mA, IGes 2A)
 - 1 relay output (230VAC, maximum 6A)
 - 1 analog output (between 0 and 10V)
- Operating/programming interface type RS232
- Stop category number 1, safety category number 2
- Variants:
 - Desktop housing W 475 x D 410 x H 187.5 mm
 - 19" housing W 482.5 x D 410 x H 177 mm

Single-axis MC1-20/40 controller

iMD single-axis controller for the isel linear units

MC1-20

- For controlling brushless servo motors reaching an intermediate circuit voltage of 48 V DC

MC1-40

- For controlling brushless servo motors reaching an intermediate circuit voltage of 310V DC

The **servo controllers of the MC1 series** are freely programmable compact controllers for a linear or rotary unit equipped with a servo motor. The single-axis controllers integrate all required components (interfaces, motion controllers, power supply, drive controller, safety circuit, as well as operating elements), which are required for the control of an axis within a compact table housing. The supplied software PAL-PC may be used in order to carry out the programming.

The MC1 model is available in two variants:

- MC1-20: For the control of brushless EC servomotors (48 V)
- MC1-40: For the control of brushless EC servo motors (310 V)

Common features

- Assessment of the Hall signals
- Commissioning program "AcSetup"
- Output power max. 500 W (MC1-20)
- 32-bit high-performance RISC processor with 256 KByte flash
- User program in CNC mode for up to 650 commands
- Program execution in CNC or in DNC mode
- Programming with PAL-PC (CNC mode), @-Format (CNC mode), ProNC, Remote (DNC mode)
- LC display including 4 lines of 20 characters per line (freely programmable)
- Additional control signals (start, stop) which can be adapted
- Connection for the incremental encoder
- 6 (8) signal inputs (of 24 V DC)
- 8 relay outputs (of 24V DC / 700 mA)
- Stop category 0 according to the standard EN60204
- An emergency stop circuit may be integrated into the higher-level safety circuits through plug connectors
- Wide range mains input:
MC1-20: 110...250 V AC, 50..60 Hz
MC1-40: 250 V AC, 50 Hz
- Table housing W 204 x H 149 x T286

- Programming instructions

Power Unit type iPU-DC / iPU-EC

Multi-axis controller

Power Unit iPU as desktop version
and with 19" housing

- Drive control for up to four brushed or brushless DC servomotors
- NC control carried out by the fieldbus CANopen
- Power output stages iMD10 / iMD20- 4-quadrant drive
 - controller- evaluation for incremental
 - encoder-standstill monitoring-over-
 - and under-voltage as well as over-temperature protection, short-circuit-proof
- Door and/or hood control
- Connection for the external control signals such as for example the EMERGENCY STOP, START, STOP to permit the integration into higher-level safety circuits
- Connection for the milling spindle (between 100 and 230VAC)
- Control elements positioned inside the front part of the housing (optional on the rear)
- Programming and/or remote operation (optional: ProNC)

The **Power Units iPU** are powerful drive controls for up to four linear or rotary axes equipped with brushed or brushless motors. The compact controller integrates all the required control components needed to execute different tasks relating to automation. These range from the power output stages of the types iMD10 or iMD20 through the I/O module to the safety control and power electronics.

As an interface for NC control, the **Power Unit iPU** has an interface of the type CANopen positioned on the rear side of the housing and working according to the bus protocol DS301 and DS402. By using the optional CAN PCI card iCC 10 or a control computer of the iPC series, the controller allows the (linear, circular, as well as helical) interpolation of all four axes as well as web processing.

In addition, the power output stages used (the type iMD10 or the type iMD20) have an automatic jerk limitation and standstill monitoring. The control elements integrated into the front part of the housing, such as the EMERGENCY STOP and the START or STOP, enable convenient operation.

Multi-axis controller type iCU-DC / iCU-EC

iMD Multi-axis Controller for the linear units of isel

- Drive control for up to six brushed or brushless DC servomotors
- NC control carried out by the fieldbus CANopen
- Power output stages iMD10/iMD20
 - 4-quadrant drive
 - controller- evaluation for incremental
 - encoder-standstill monitoring-over-
 - and under-voltage as well as
 - over-temperature protection, short-circuit-proof
- Door and/or hood control
- External EMERGENCY STOP for the integration into higher-level safety circuits
- Connection for external control signals such as START, STOP, RESET through signal inputs
- Connection for the milling spindle (between 100 and 230V AC)
- Industrial control computer based on Windows® with
 - PCI card type CANopen
 - driver software for the CNC control
- Programming and/or remote operation (optional: ProNC)

The can controllers of the iCU-DC and iCU-EC series are compact and powerful drive controllers for 2 to 6 DC servomotors offering an ideal price/performance ratio.

The table housing integrates all control components you need to execute a wide variety of tasks when it comes to automation. These range from the output stage through the I/O module to the safety control.

A PCI card of the type CANopen is integrated in the control computer and as an interface and serves as a CANMaster for the drive controller and for the I/O module. Furthermore, the external extensions to up to 128 can nodes are easily feasible. Among other things, the rear connections of the control computer enable the simple monitor connection. Thanks to the existing USB interfaces, you can connect different peripheral devices such as your mouse and your keyboard. A LAN connection allows the integration into an existing network and can be used for remote maintenance as well.

The NC control core enables the interpolation of up to 6 (linear, circular as well as helical) axis by additionally offering an online and look-ahead web processing. When using the ProNC software, the individual axes can be controlled as handling axes (in addition to the interpolating axes).

All power amplifiers are equipped with an automatic jerk limitation and a standstill monitoring (up to the safety category number 3).

Technical data

- Control computer connections: VGA, 4 x USB (2 x front, 2 x rear), RJ45 Ethernet (100 Mbit/s)
- 0...10V output for the external frequency converter used for the main spindle equipped with a speed control
- Wide-range mains input of 115 V AC / 230 V AC, 50...60 Hz
- Switching power supply 1000 W / 48 V
- Power output stages iMD10 / iMD20
 - Supply voltage: 24...80 V DC
 - peak/rated current: 25 A / 12 A
- Inputs/outputs of the CAN I/O module
 - 4 digital inputs-8 digital outputs
 - 1 relay output (230 V AC, maximum 6 A)
 - 1 analog output (will not be applied if you opt for the frequency converter)
- CAN Safety circuit
 - module up to safety category
 - 3-Door circuit
 - control- Spindle control
- Table housing W 630 x H 230 x D 400 mm
- Options:
 - Frequency inverter for iSA500 - iSA2200
 - Additional CAN I/O module (16 x inputs, 16 x outputs)

Drive controller iMD 20 and iMD 40

For servo motors

General information

The **iMD 20** drive controller is one of the most proven and cost-effective output stages used for the EC servo motors. Our fully digital drive controller model **iMD40** is a power amplifier for EC servo motors (synchronous motors such as linear or torque motors) up to 2kW.

The typical applications for this driver controller are the CNC machines as well as the automation technology. The housings of the power amplifiers are optimized for their installation within the control cabinet. The extensive options in terms of parametrization permit the flexible adaptation to a wide variety of applications, and all required settings can be made by using a user-friendly commissioning software.

Various user interfaces are available for the integration into your own applications. The interface CANopen should be especially mentioned in this context. In addition to synchronous point-to-point positioning (S-PTP) and speed control, continuous path control (CP) and time-synchronized multi-axis applications may be implemented through the implemented protocol DS402 of the type CANopen. Additional interfaces are a $\pm 10V$ interface (speed set-point) and an interface of the type RS232

Short controller cycle times (current, speed, as well as position controllers) guarantee the ideal behaviour for highly dynamic drives. The drive controllers are suitable for both rotary as well as the corresponding linear direct drives and torque motors (types iMD20 and iMD40). The redundant standstill monitoring has been integrated into the drive controllers. This permits the reduction of the effort in external modules of the control system to a minimum by making the use and/or the application of the machine comfortable.

**Technical data**

	iMD 20	iMD 40
Motor type	Brushless servo motors (EC, BLDC)	Brushless servo motors (EC, BLDC)
Supply voltage	40 - 95 VDC	Network of 230 VAC, 1-phase
Motor current	Continuous current 12 A, peak current 25 A	Continuous current 6.5 A Peak current 8 A
Can bus interface	CANopen DS301 v4.0 and DS402 v1.0 of the CiA (CAN in Automation)	CANopen DS301 v4.0 and DS402 v1.0 of the CiA (CAN in Automation)
Interface of the type RS-232 (asynchronous, 19.2 or 57.6 kBit/sec.)	For commissioning (AcSetup.exe) or for example, PLC connection; Effective transmission protocol	For commissioning (AcSetup.exe) or for example PLC connection; effective transmission protocol
Measurement system	Incremental encoder (type RS422); Maximum input frequency: 1.25 MHz	Incremental encoder (type RS422); maximum Input frequency: 1.25 MHz
Commutation	Hall sensor signals	
Analog input (± 10 V)	11 bit resolution	
PWM switching frequency	maximum of 16.4 kHz	
Inputs for end and reference switch	✓	✓
Digital power, speed and position control	Sampling times: at least $61\mu s/244\mu s$ / $488\mu s$ for current / speed / position controller	
Brake control	✓	✓
Gantry operation and/or Synchronous control	From 2 modules, master-slave through the CAN bus	
Monitoring of the motor current	Short ^{circuit} , I ₂ t, pulse-by-pulse	
Monitoring of the encoder signals	✓	✓
Monitoring of the software by the internal watchdog timer	✓	✓
Facilitated update of the firmware through RS-232	Feasible on site by the customer or by a service technician	
Standstill monitoring	Redundancy according to the ISO standard	
Dimensions	180 x 35 x 120 mm	180 x 50 x 150 mm
Part No. Drive controller(s)	314 030	314 040

isel®successful with
CNC TECHNOLOGY

Control software remoteNC

Function scope

- support of digital joysticks
- panel "Quick File Selection" for the batch production
- utility milling machines/multiple output with shifts
- graphic representation of the processing file with zero point and dimensions

File formats isel-NCP, DIN66025 / G-code

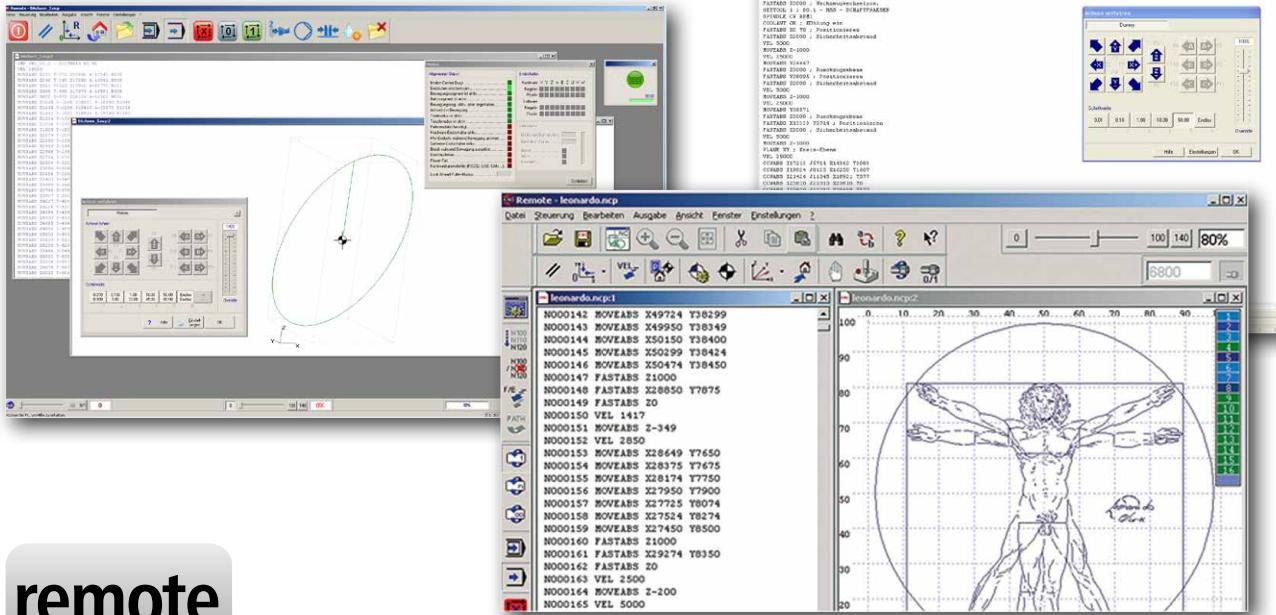

- linear, circular, and helix interpolation, and drilling cycles
- access to digital and analog inputs and outputs
- in case of the use of a CAN control: input/output "On-The-Fly" (without movement stop) for dispensing applications
- message window, messages in the status line, time delay, input of variable values
- definition and use of machine positions (workpiece zero point, parking position, home position...)

Additional functions for the isel-CNC file format (ProNC output format)

- repeating and counting loops,
- branches
- arithmetic and trigonometric functions
- subprogram technique
- integration of real and string variables
- loading and saving of process variables
- access to user-specific extensions, option of calling up user software

Features

- compatibility with earlier versions of the program
- processing of the file formats DIN66025 (G-code), NCP or CNC
- immediate processing without conversion, translation or transformation of the file
- integrated text editor with many functions for rapid corrections to the existing NC program
- use of up to 6 interpolating axes (cartesian coordinate system and 3 auxiliary axes)
- look-ahead path processing by means of CAN control
- management of a milling spindle
- 2 E/A units may be used (maximum of 64 inputs, 64 outputs)
- signalling inputs and outputs for the process synchronisation
- manual axis movement with joystick, keyboard, and mouse
- step-by-step processing and system monitoring for commissioning operations
- user interface, configurable for ease of use, series production, handshake equipped with master PLC...
- control panels for motion control, input/output, spindles, and tool change by means of buttons
- available in several languages (German, English, French, Hungarian)

remoteNC is a universal control program for the output of files during the machining processes of milling, drilling, gluing, engraving, applying as well as in the field of water jet cutting or laser cutting/welding. Supported file formats are the isel-specific NCP format (ASCII file with machining data created by a CAM post-processor), the isel-specific CNC format (the ASCII files in an extended format

for universal use in the field of process automation, created by ProNC) as well as the G-code format in accordance with the standard DIN 66025. remoteNC is primarily used for the control of CNC machines for a wide variety of tasks and processing. This is why flexibility is a main feature of the program. A wide selection of options enables the simple adaptation to the respective requirements.

Control software remoteNC

- runs under Windows operating systems
- universal CNC control program for NCP files and G-code
- for additive and subtractive methods; water jet and laser cutting
- linear, circular, and helix interpolation, and drilling cycles
- configurable user interface for ease of use, series production, handshake equipped with master PLC
- look-ahead path processing by means of CAN control
- up to 6 interpolating axes may be controlled

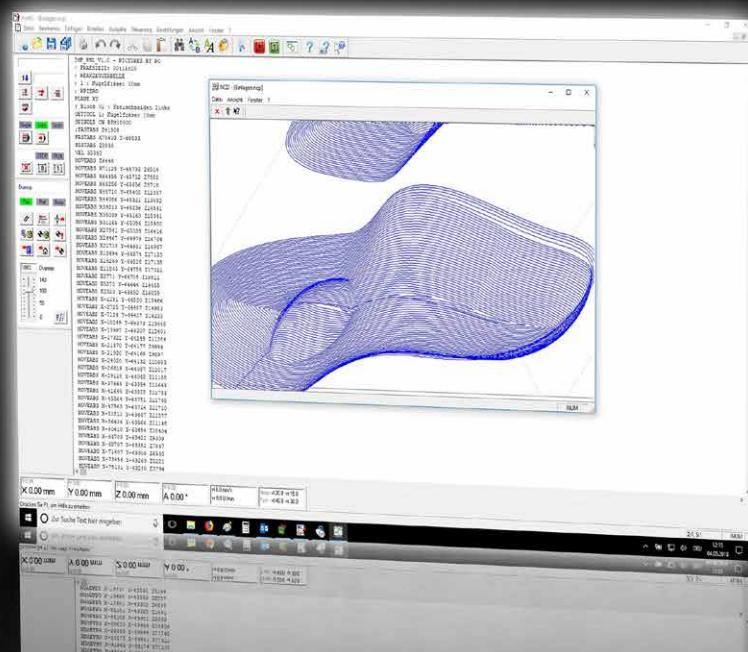

Order data

Software remoteNC for
CAN-CNC controls (Windows) Z12-334500

Part No.

Automation software proNC

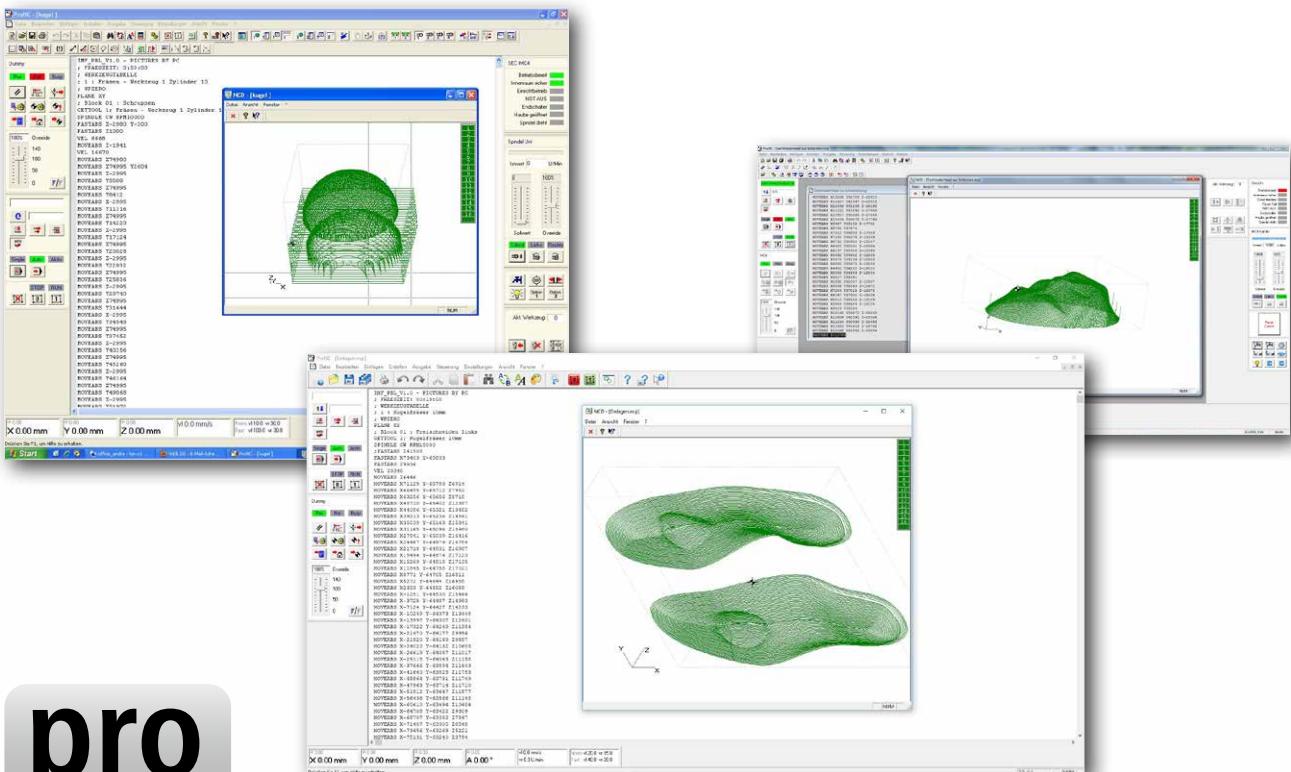

Function scope

- path commands for the relative and absolute positioning of the interpolating axes
- programming of additional axes in the handling mode
- circular and helix interpolation, and drilling cycles
- repeating and counting loops, and branches
- numerous math and trigonometric functions
- subroutine technology, and symbolic variable
- integration of real and string variables
- message window, messages in the status line
- loading and saving of process variables
- access to digital and analogue inputs and outputs
- "On-The-Fly" input/output (without movement stop) for dispensing applications
- access to the user-specific extension DLLs (Dynamic Link Libraries)
- comfortable debug support (breakpoints, monitoring for status and variables)

Features

- programming in accordance with the standard DIN66025 (G-codes) or isel-PAL
- compatibility with earlier program versions (ProDIN, ProPAL)
- integrated text editor with numerous functions for rapid and efficient editing of the source code
- import of geometry data (NCP, such as for example by isy-CAD/CAM)
- use of up to 6 interpolating axes and up to 6 handling axes (equipped with a CAN control)
- look-ahead path processing equipped with CAN control
- up to 4 spindle motors may be used
- up to 4 E/A units may be used (maximum of 64 inputs, 64 outputs)
- signalling inputs and outputs for the process synchronisation
- teach-in with joystick, keyboard, and mouse
- offline programming with simulation modules
- step-by-step processing, breakpoints, and system monitoring for commissioning operations
- may be individually expanded with software libraries
- control panels for motion control, input/output, spindles, and tool change by means of buttons
- control panel for a maximum of 6 handling axes independent of the interpolating axes
- available in the German and English language

Every single automation solution is based on high-performance software, by means of which the tasks at hand can be rapidly and conveniently converted into a practical solution. In this context, the proNC operating and programming interface is the ideal solution.

Programming software proNC

- runs under Windows operating systems
- available for current controls and controllers by isel
- applications can be created in accordance with the isel-PAL or DIN66025 proNC is ideally suited for automation solutions in the fields of milling, drilling, standard dispensing applications, assembly, handling, loading and quality testing, where the user programs are predominantly textual using teach-in functions, as well as the import of contour data sets (such as for example NCP format).

Order data

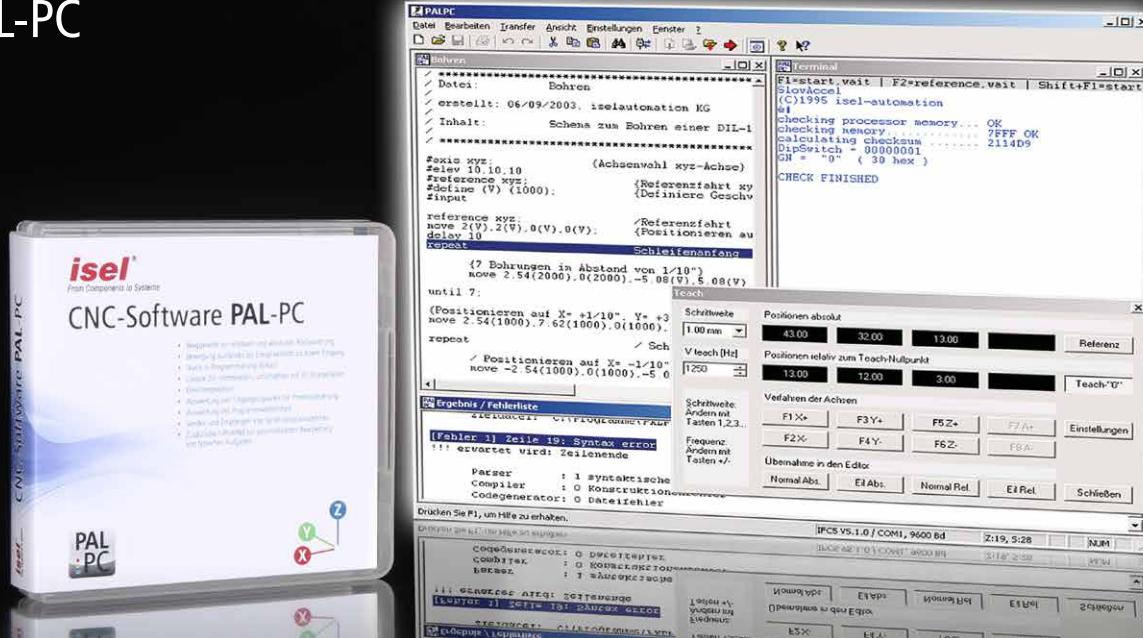

Software proNC for
CAN-CNC controls (Windows) Z11-333500

Part No.

Automation software

PAL-PC

Function scope

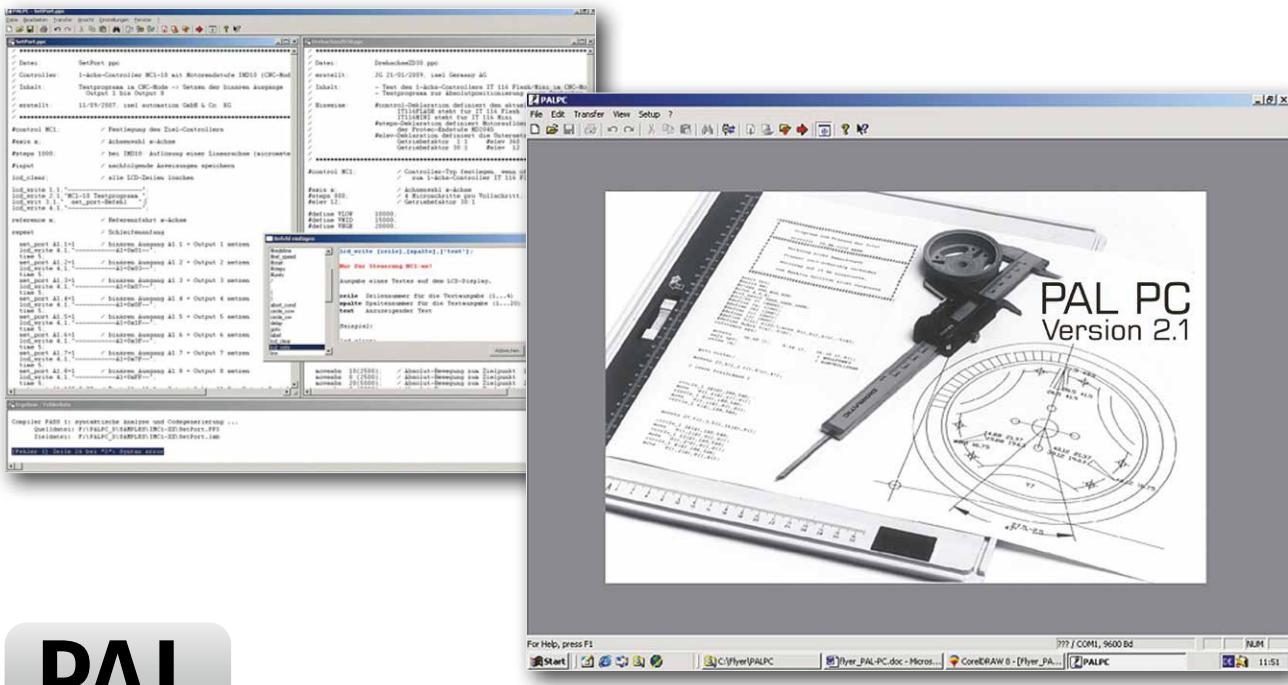

- travel commands for relative and absolute positioning
- execution of the movement until an event occurs at an input
- (linear) teach-in programming
- linear 2D interpolation, switchable to 3D interpolation
- circular interpolation
- evaluation of input signals for the process control
- loops for the repetition of instruction blocks
- unconditional and conditional branches
- evaluation of the program selection unit
- output of messages on a display
- transmission and receipt of synchronisation characters
- additional tools for the automated processing of typical tasks

Program development environment for CNC stepper motor controller

- programming in accordance with isel-PAL
- 2D and 3D interpolation
- teach-in programming
- memory mode (CNC mode)
- operating systems Windows 32/64bit

Features

- compatible with previous versions (PAL-PC programs created with an earlier version of PAL-PC may be used without any adaptation)
- programming in accordance with isel-PAL
- integrated editor: rapid and comfortable editing of source texts, editor functions such as "search", "replace", "copy" and "paste", automated code generation, multiple undo/redo for efficient program creation
- the PAL-PC may (depending on the type of control in use) control controllers with up to 4 axes
- terminal for direct communication by means of the controller
- download of externally created CNC programs
- automatic determination of the type and transmission rate of the connected controller
- display of syntax errors and navigation to errors in the source code
- rapid overview of commands with optional insertion into the program
- teach-in programming by means of keyboard or mouse
- integration of the target positions as formatted source code into the editor
- live display of the current status at the inputs/outputs
- setting of outputs during program creation
- available in the German and English language

PAL-PC enables the rapid, simple, and inexpensive implementation of automation projects such as handling systems, automatic drilling machines, cycle devices, measuring and testing systems, automatic machines for individual and series processing and much more ...

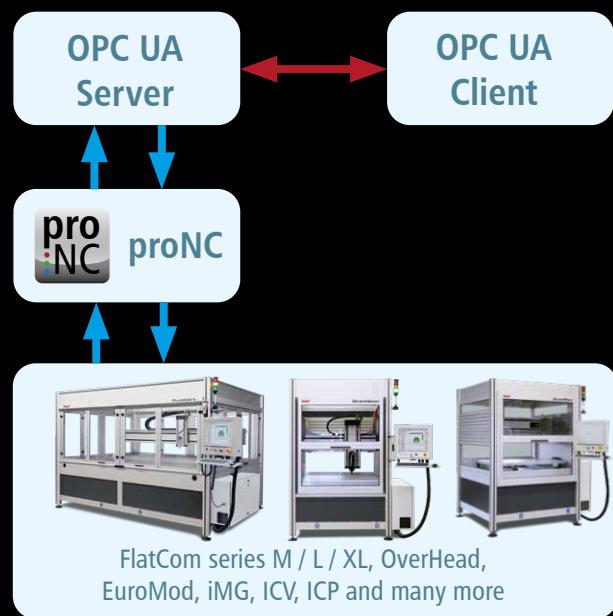

Process automation software PAL PC

- runs under Windows operating systems
- the PAL-PC is a modern program development environment for CNC stepper motor controllers and for CNC machines.
- the PAL-PC uses the memory mode (CNC mode) of the target controller. By means of the PAL-PC, automation solutions are created where the controller works in a stand-alone mode, i.e. independently of a control computer

PAL-PC - software for process automation (Windows)	Z11-331810

Software extension module

OPC UA (Open Platform Communication, Unified Architecture)

... is a communication protocol for Industrie 4.0 and the Internet of Things (IoT). This protocol enables standardized data exchange between machines, devices and components used in the industrial sector. The interface standard is independent of manufacturers or system suppliers of an application, of the programming language in which a software was programmed and of the operating system on which the OPC UA application is finally executed.

Features

- OPC UA software extension module for isel machines.
- recommended hardware: Intel Core i3/i5, AMD Ryzen 3/5 or higher
- runs under Windows operating systems
- connection of already existing systems and machines possible (update of ProNC may be required)
- integration of almost all machine models possible
- continuous expansion and supplementation of the information models provided
- compatible with common clients (more details on request)

Scope of functions

With a view to the usability of the isel machine series in an automation environment, useful functions from various information models were implemented in the isel OPC UA server application, which support the use of the machine by an OPC UA client. The functions provided enable the easy integration of almost all machine series offered by isel into OPC UA-based automation processes.

The following information models were implemented with the specified information:

- **Euromap 77**
Job management, machine configuration, machine information, machine status
- **Umati**
(universal machine technology interface)
Machine identification, machine monitoring (Machine-Tool), production information (ActiveProgram)
- **Manufacturer-specific isel**
Access to machine and control parameters, access to variables, reading and writing of digital and analog inputs and outputs, job management via flag signaling, querying of process data, and much more.

CAD-CAM software isy-CAM 2.8

Function scope

- MultiCore support
- dynamic rotating simulation
- freely definable line types and colours
- integrated online support and configurable user interface
- parallel and independent work on several drawings
- geometric elements such as points, lines, ellipses, circles, curves (polygons, splines, Bézier curves, NURBS), polygons and much more.
- direct use of Windows fonts
- professional number and text editing functions
- hatching, and freely definable hatching types
- automatic arrangement and alignment functions
- sketch contours and their interactive modification
- numerical input options for absolute, relative, and polar coordinates
- extensive DIN/ISO-compliant measuring and dimensioning functions
- trimming, separating and drawing curves, converting various geometry types
- geometry manipulation by moving and copying as translation, rotation, scaling, and mirroring
- smart object snap
- ideal control of the calculated NCP data through integrated online simulation of the tool paths
- generation of machining data for all typical 2D and 2.5D manufacturing tasks
- output format: NCP format

Features of isy-CAM 2.8 and 3.6

- CAD functionalities (without volume modeller)
- runs under Windows operating systems
- import: DXF / EPS / AI / 3D-STL data
- export: NCP format
- proven CAM strategies for drilling / contour / pocket milling
- engraving with gouge
- 4-axis cylinder machining
- 3D roughing and finishing of STL data (for example, scan models in 3D)
- direct call of REMOTE from the isy-CAM

AUTODESK® Fusion 360™

Autodesk HSM was particularly developed for the use with Autodesk® Inventor®/ SolidWorks®/ Fusion360™ and represents a logical addition to CAD software for the CAM sector. Experienced CAD users feel at home when working with Autodesk HSM and can create toolpaths of the highest quality-level within a couple of minutes. The new users benefit from the unsurpassed 2D and 3D functionalities of the CAD solution and can rapidly and easily expand the know-how acquired through the CAM process. The result consists of a qualitatively improved design and of shorter product development times.

Optimal toolpaths

The toolpath strategies by Autodesk HSM are designed for the generation of the smoothest and most efficient toolpath possible in order to reduce machining time, improve the surface quality, and reduce the wear level of the tools.

Function scope

- certified post-processor for isel CNC machines equipped with 3/4/5 axis
- the first cloud-based CAD/CAM solution of the world
- excellent 2D/3D CAD functionality
- very easy to use
- short processing times/reduced level of tool wear
- networking - communication - better cooperation

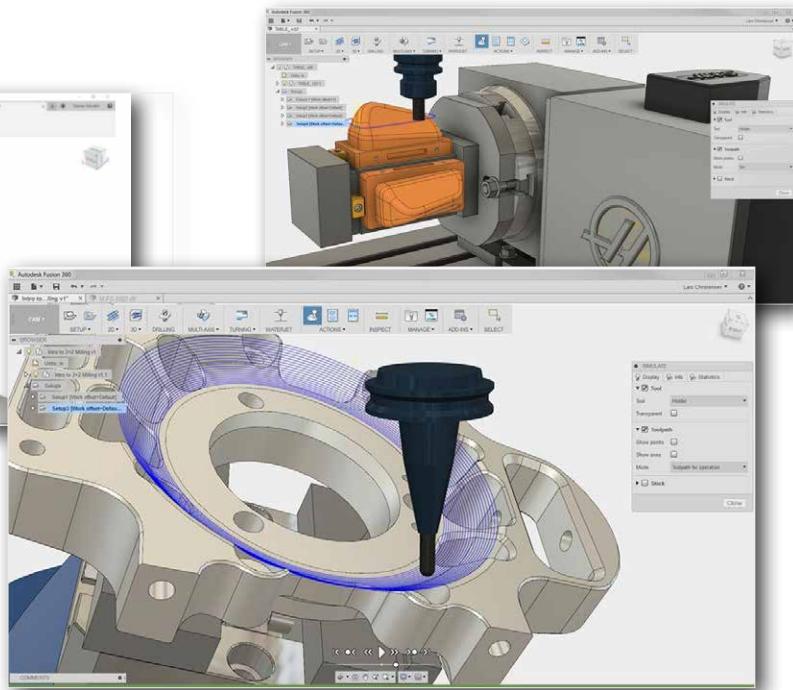

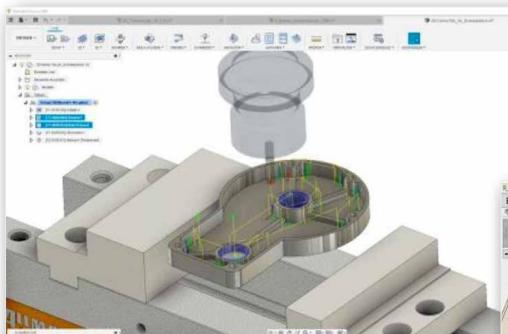

Try Fusion360™ for free

Are you a start-up entrepreneur with a yearly turnover under € 100,000 or you a leisure user?

Then you may possibly take advantage of a free usage. Find out more directly from the Autodesk reseller, the company HSMTEC GmbH

Features

- excellent 2D/3D CAD functionality achieved through the combination with Autodesk® Fusion 360™
- consistency from the CAD model to the NC file
- very easy to use, resulting in extremely short training and familiarisation times
- extremely short calculation times thanks to the use of the most recent technologies (multi-core, 64 bit)
- extremely short machining times/less toolwear thanks to innovative strategies (like for example adaptive clearing, and HSC machining)
- integration of numerous interfaces:
2D: DXF, DWG
3D: IGES, STEP, STL, Parasolid, ACIS, JT
Direct: Pro/E, Autodesk, SolidEdge, SolidWorks, Catia etc.

Adaptive Clearing - HSC roughing:

By means of Adaptive Clearing you can reduce the processing time by up to 40%!
Uniform cutting volume, constant feed, and uniform cross infeed

The HSC roughing strategy "Adaptive Clearing" is currently the trochoidal roughing method especially designed for machining machinable materials. Compared to conventional pocket roughing strategies, HSC roughing consistently remains in up-cut or down-cut operation without performing full cuts. Each cut - even in corner areas - is only made with the maximum specified transverse infeed.

Due to the special arrangement and the internal rounding of the traversing movements, a complete looping of the tool is avoided and the specified feed rate on the machine is kept on a constant level. Since the transverse infeed is constant as well, this results in a uniform cutting volume reducing the tool vibration by significantly increasing the service life.

Our CAD/CAM partner, the company HSMTEC GmbH, www.hsmtec.de

New definition of CAD/CAM

Fusion 360™ is the CAM solution combining CNC programming, simulation, and design with real-time collaboration as well as online project and data management in a single and easy-to-use product. Directly integrated with Autodesk® Fusion 360™ modeling, the users are able to rapidly complete routine tasks such as the model preparation and adaptation. You will be able to work with all major CAD formats so to be productive from the start.

Flexibility

Autodesk® Fusion 360™ breaks the boundaries of the traditional CAD/CAM applications by providing access to professional CNC programming tools whereby this is possible regardless of the existing CAD data format. Whether 2D/3D data, the software Autodesk® Inventor® or Solidworks® on Mac or PC Fusion 360™ covers it all.

Real-Time Collaboration

Fusion 360™ is also excellent for the collaboration. It helps to bring people and ideas together through a uniform interface controlled by the designer/programmer. Invite team members or partners and cooperate on important tasks as you are used to in social networks.

Quality

Fusion 360 uses the same proven HSM CAM Kernel HSMWorks and Inventor CAM does. In this manner, you are able to generate toolpaths very quickly, by reducing cycle times, machine and tool wear and by consequently producing components of the highest quality.

Our customers as well as the projects we carry out for our customers are as varied as our services.
